SCHEDULE A-TC

TRAFFIC CONTROL SERVICE

APPLICABILITY

Applicable to local, state or other governmental agencies for service to traffic signal systems utilized 24 hours per day, located on streets, highways or other public thoroughfares. This schedule is closed to new customers with non-residential loads that maintain a minimum annual load factor of at least 90 percent, as demonstrated by load sampling, and to customer owned outdoor area lighting furnished from dusk to dawn where photo cells have been installed on all loads. When served in conjunction with traffic signal systems, this service is also applicable to attached illuminated traffic directional signs; flashing beacons; aircraft warning obstruction lights; other traffic control devices; transit shelters; and energy-only service to street lights. This schedule is not applicable to any customer whose maximum demand equals, exceeds, or is expected to equal or exceed 20 kW for three (3) consecutive months.

Small Business Customers, as defined in Rule 1 and not identified by the California Air Resources Board as Emission Intensive, Trade-Exposed Entities (EITE), qualify for a semi-annual California Climate Credit of $(49.36), which will display as a separate line item per Schedule GHG-ARR.

TERRITORY

Within the entire territory served by the utility.

TRAFFIC CONTROL SERVICE

RATES

TOTAL RATES FOR UNBUNDLED AND BUNDLED CUSTOMERS

All Customers

		Secondary
Basic Service Fees	**$/Month**	
<=5 kW		12.02
>5 kW		19.23

Unbundled Customers (Total UDC + WF-NBC + DWR-BC)[1]

		Secondary
Total Energy Rates	**$/kWh**	
Summer		0.17287
Winter		0.17287

TOTAL RATES FOR BUNDLED CUSTOMERS

Bundled Customers on EECC (Total UDC + WF-NBC + DWR-BC + EECC)

		Secondary
Total Energy Rates	**$/kWh**	
Summer		0.28509
Winter		0.28509

1. Direct Access, Community Choice Aggregation and Transitional Bundled Service Customers pay the applicable Vintaged Power Charge Indifference Adjustment (PCIA). Bundled PCIA is embedded within the bundled generation rates.

SCHEDULE A-TC

TRAFFIC CONTROL SERVICE

RATES (Continued)

Minimum Charge

The minimum charge shall be the Basic Service Fee.

Rate Components

The Utility Distribution Company Total Rates (UDC Total) shown above are comprised of the following components (if applicable): (1) Transmission (Trans) Charges, (2) Distribution (Distr) Charges, (3) Public Purpose Program (PPP) Charges, (4) Nuclear Decommissioning (ND) Charge, (5) Ongoing Competition Transition Charges (CTC), (6) Local Generation Charge (LGC), (7) Reliability Services (RS), and (8) Total Rate Adjustment Component (TRAC).

Certain Direct Access customers are exempt from the TRAC, as defined in Rule 1 – Definitions.

Franchise Fee Differential

A Franchise Fee Differential of 5.78% will be applied to the monthly billings calculated under this schedule for all customers within the corporate limits of the City of San Diego. Such Franchise Fee Differential shall be so indicated and added as a separate item to bills rendered to such customers.

(Continued)

SCHEDULE A-TC

TRAFFIC CONTROL SERVICE

GENERAL SPECIAL CONDITIONS

1. Definitions: The Definitions of terms used in this schedule are found either herein or in Rule 1.

2. Basic Service Fee Determination: The basic service fee will be determined each month based on the customer's Maximum Annual Demand. If demand is unavailable, or less than 50% of the 15-minute interval data is available, demand will be derived by dividing the total kilowatt hours by the number of days in the billing period times 24 hours.

3. Voltage: Service under this schedule normally will be supplied at a standard available Voltage in accordance with Rule 2.

4. Voltage Regulators: Voltage Regulators, if required by the customer, shall be furnished, installed, owned, and maintained by the customer.

5. Reconnection Charge: Any customer resuming service within twelve months after such service was discontinued will be required to pay all charges which would have been billed if service had not been discontinued.

6. Load Factor: The minimum annual load factor will be based on the Maximum On-Peak Period Demand occurring during the summer period.

7. Load Sampling: Customers electing to receive service under this schedule by Load Sampling shall be required to obtain interval meter data, per Rule 9, Section G. Customers requesting service for multiple accounts are required to conduct a random load sample, for the initial 12 consecutive months service is provided under this schedule, in order to establish eligibility. The sample used must be a minimum of five (5) accounts, located at the utility's sole discretion. The utility may waive the sampling requirement if, in its opinion, the load is of the nature that it will continuously exceed a 90 percent load factor.

8. Customer Billing: Customers electing to receive service under this schedule by load sampling shall be billed as if service was taken under Schedule A until customer eligibility has been established. Customer eligibility will be established after the 12-month sample demonstrates that all requested accounts meet the load factor requirement during the sampling period. If one or more of the sampled accounts do not meet the applicability requirements, all accounts will be ineligible for this rate schedule. Once the customer's eligibility has been established under this schedule, the customer will be refunded the difference between Schedule A and this schedule, for those months after service was requested on Schedule A-TC and the customer was billed under Schedule A.

SCHEDULE A-TC

TRAFFIC CONTROL SERVICE

GENERAL SPECIAL CONDITIONS (Continued)

9. Billing: A customer's bill is first calculated according to the total rates and conditions listed above. The following adjustments are made depending on the option applicable to the customer:

   a. **UDC Bundled Service Customers** receive supply and delivery services solely from the Utility. The customer's bill is based on the Total Rates set forth above. The EECC component is determined by multiplying the EECC price for this schedule during the last month by the customer's total usage.

   b. **Direct Access (DA) and Community Choice Aggregation (CCA) Customers** purchase energy from a non-utility provider and continue to receive delivery services from the Utility. The bills for a DA and CCA Customer will be calculated as if they were a UDC Bundled Service Customer, then crediting the bill by the amount of the EECC component, as determined for a UDC Bundled Customer, and including the appropriate Cost Responsibility Surcharge (CRS), if applicable.

   Nothing in this service schedule prohibits a marketer or broker from negotiating with customers the method by which their customer will pay the CTC charge.

10. Other Applicable Tariffs: Rules 21, 23 and Schedule E-Depart apply to customers with generators.

11. Generator Operation: The operation of a non-utility generator unless expressly authorized by tariff is prohibited.

(Continued)

SCHEDULE A-TC

TRAFFIC CONTROL SERVICE

EECC SPECIAL CONDITIONS

1. Definitions: The definitions of principle terms used in this schedule are found either herein or in Rule 1, Definitions.

2. Service Restrictions: Service under this schedule is restricted to the entire load served by single meters. The electric load of a single meter may not be partitioned among services rendered under this schedule and services rendered by a non-utility party under Direct Access or Community Choice Aggregation (CCA).

3. Terms of Service: A customer receiving optional service under this Schedule may elect to change to another applicable rate schedule, but only after receiving service on this Schedule for at least 12 consecutive months, except as specified in EECC Special Condition 4. If a customer elects to discontinue service on this Schedule, the customer will not be permitted to return to this Schedule for a period of one year, unless returning to service from a Direct Access Provider or a Community Choice Aggregator (CCA) in less than one year. T

4. Early Termination: An eligible customer may elect to take commodity from a Direct Access provider or from a CCA during its Term of Service granted it has complied with all other applicable tariff requirements, including, but not limited to the terms and conditions set forth in Rules 25.1 and 27, respectively.

5. TOU Period Grandfathering: Pursuant to D.17-01-006 and D.17-10-018 TOU Period Grandfathering permits certain eligible behind-the-meter solar customers to continue billing under grandfathered TOU period definitions after new TOU Periods are implemented, for a specific period of time.

   TOU Period Grandfathering Eligible Customer Generator (Non-Residential): A non-residential customer with an on-site solar system, who has filed an initial interconnection application by January 31, 2017. The on-site solar system must be designed to offset at least 15% of the customer's current annual load. For Public Agency customers, defined here as public schools, colleges and universities; federal, state, county and city government agencies; municipal utilities; public water and/or sanitation agencies; and joint powers authorities, the non-residential account must have filed an initial interconnection application by December 31, 2017.

   TOU Period Grandfathering Term (Non-Residential): Upon SDG&E's implementation of updated TOU periods adopted in D.17-08-030, TOU Grandfathering Eligible Customer Generators will continue to be billed under prior existing TOU periods and resulting rates for the remainder of their applicable TOU Grandfathering Term, which begins upon issuance of a permission to operate customer's on-site solar system and continues for 10 years. In no event shall the duration of a customer's grandfathering term extend beyond July 31, 2027 (December 31, 2027 for schools). Upon expiration of a customer's TOU Period Grandfathering Term, the customer will be billed using his otherwise applicable TOU periods and associated rates beginning with the customer's next billing cycle.

6. PCIA Recovery in Bundled EECC Rates: Bundled Service customers on EECC rates include an amount to recover the above-market portion of SDG&E's generation portfolio. This above-market portion is referred to as the Power Charge Indifference Adjustment (PCIA) amount and is shown on Bundled Service customers' bills under the Breakout of Current Charges panel and embedded in Electric Generation charges.
