SCHEDULE PUBLIC GIR

Sheet 1 N

GRID INTEGRATED RATE

APPLICABILITY

N

This Schedule is applicable to customers charging an Electric Vehicle that is:

1. a currently registered Motor Vehicle, as defined by the California Motor Vehicle Code, which is a battery electric vehicle (BEV) or plug-in hybrid electric vehicle (PHEV), and
2. charged through Utility owned and operated Green Shuttle Project facilities located at applicable sites.

At the election of the applicable site hosting the Green Shuttle Project Facilities (Site Host), this schedule is applicable to either the individual electric vehicle customer charging through the Green Shuttle Project Facilities (Billed to Driver), or the Site Host charging through the Green Shuttle Project Facility (Billed to Host).

Effective discounts for California Alternative Rate for Energy (CARE), Family Electric Rate Assistance (FERA) and Schedule DE do not apply to service under Schedule PUBLIC GIR, which is for BEV and PHEV charging only.

Pursuant to decision D.18-01-024, customers or site hosts can pass through this rate to drivers charging at publicly available Electric Vehicle Supply Equipment (EVSE).

TERRITORY

Within the entire territory served by the Utility.

RATES

Total hourly charges for customers on this hourly dynamic schedule will be calculated using the rates below. Charges will consist of:

1. Hourly Base Rate; and
2. Hourly Commodity Base Rate with an adjustment based on the California Independent System Operator (CAISO) day-ahead hourly price, and an applicable adder to reflect the system's top 150 system peak hours, and
3. Hourly Distribution Base Rate with an applicable adder to reflect the top 200 annual hours of peak demand for the individual circuit feeding the VGI charging stations.

N

(Continued)

SCHEDULE PUBLIC GIR

GRID INTEGRATED RATE

RATES (Continued)

Hourly Base Rate:

The hourly Base Rate will be charged on a volumetric (per kWh) basis.

Base Rate		
Transmission	0.04260	
Public Purpose Programs (PPP)	0.01840	
Nuclear Decommissioning (ND)	0.00000	
Competition Transition Charge (CTC)	(0.00007)	
Local Generation Charge (LGC)	0.00883	
Reliability Services (RS)	0.00005	
DWR Bond Charge (DWR-BC) + Wildfire Fund Non-Bypassable (WF-NBC)	0.00591	
Subtotal Base Rate	0.07572	

The Subtotal Base rates shown above are comprised of the following components:

(1) Transmission, (2) Public Purpose Program (PPP) Charges, (3) Nuclear Decommissioning (ND) Charge, (4) Ongoing Competition Transition Charges (CTC), (5) Local Generation Charge (LGC), (6) Reliability Services (RS), (7) Department of Water Resources Bond Charge (DWR-BC) and (8) Wildfire Fund NonBypassable Charge (WF-NBC).

Transmission rate includes the Transmission Revenue Balancing Account Adjustment (TRBAA) of $(0.00304) per kWh and the Transmission Access Charge Balancing Account Adjustment (TACBAA) of $(0.00993) per kWh. PPP rate is composed of: Low Income PPP rate (LI-PPP) $0.01175 per kWh, Non-low Income PPP rate (Non-LI-PPP) $0.00659 per kWh.

Hourly Commodity Rate:

The hourly Commodity Rate will be charged on a volumetric (per kWh) basis.

Commodity Rate		
*Commodity Base Rate	0.10628	I
CAISO day-ahead hourly price	updated daily, day-ahead	
PUBLIC GIR day-ahead Generation Capacity Component Hourly Adder (if applicable)	0.89314	I

The Total Commodity Rate shown above is comprised of the following components:

(1) Commodity Base Rate, and

(2) CAISO day-ahead hourly price (prior day CAISO Commodity Rates will be used if CAISO market data is delayed beyond the following cut-off time: 5:00 pm for the day-ahead market), and

(3) Applicable PUBLIC GIR day-ahead Generation Capacity Component Hourly Adder; the PUBLIC GIR Generation Capacity Component Hourly Adder is added to the system's top 150 peak hours on a day-ahead basis based on CAISO day-ahead demand forecast.

SCHEDULE PUBLIC GIR

GRID INTEGRATED RATE

RATES (Continued)

Hourly Distribution Rate:

The hourly Distribution Rate will be charged on a volumetric (per kWh) basis.

Distribution Rate		
*Distribution Base Rate	0.09488	R
PUBLIC GIR day-ahead Distribution Capacity Component Hourly Adder (if applicable)	0.34122	R

The Total Distribution Rate shown above is comprised of the following components:

(1) Distribution Base Rate, and

(2) Applicable PUBLIC GIR day-ahead Distribution Capacity Component Hourly Adder -- the top 200 annual hours of the circuit feeding the PUBLIC GIR charging stations on a day-ahead basis when the forecasted load exceeds a threshold levels established based on historic load.

*Total Base Rate:

The hourly Total Base Rate, not including the CAISO day-ahead rate or any applicable commodity or distribution Hourly Adders, will be charged on a volumetric (per kWh) basis.

Total Base Rate		
*Subtotal Base Rate	0.07572	
*Commodity Base Rate	0.10628	I
*Distribution Base Rate	0.09488	R
Total Base Rate	0.27688	I

Taxes and Franchise Fee Differential

Any applicable taxes and franchise fees differentials associated with service under this Schedule will be based on the location of the Green Shuttle Project Facilities where the charging occurred.

A Franchise Fee Differential of 5.78% will be applied to the bills calculated under this Schedule for all customers charging their vehicle within the corporate limits of the City of San Diego.

SCHEDULE PUBLIC GIR

GRID INTEGRATED RATE

N

SPECIAL CONDITIONS

1. Metering: PUBLIC GIR Program Facilities will record fifteen minute interval data compatible with the Utility's PUBLIC GIR system's meter reading, time-of-use billing, and telecommunications systems. The meter will generate interval reads which are of billing quality. This billing data will be supplied to the Utility by charging service vendors, or related, under contract to the Utility, who have been qualified by the Utility to serve charging needs and fulfill the data requirements the Green Shuttle Project.

2. Billing: Prior day CAISO Commodity Rates will be used if CAISO market data is delayed beyond the following cut-off time: 5:00 pm for the day-ahead market. CAISO market data posted or corrected after the above cut-off times will not be used for PUBLIC GIR rate calculations and after-the-fact rate adjustments will not be made.

3. Definitions: The Definitions of terms used in this Schedule are found either herein or in Rule 1.

   a. Green Shuttle Project Facilities: Green Shuttle Project Facilities are electric vehicle charging facilities that are installed, owned and operated by SDG&E pursuant to Decision (D.) 18-01-024.

   b. Site Host: The Site Host is an applicable site that allows SDG&E to install, operate and maintain Green Shuttle Project Facilities on its property. Site Hosts agree to participate in and follow the requirements of the Green Shuttle Project. The Site Host determines if the Green Shuttle Project Facilities on its property will be Billed to Driver or Billed to Host.

   c. Billed to Driver: Billed to Driver refers to Schedule PUBLIC GIR charges billed to an individual electric vehicle customer charging through the Green Shuttle Project Facilities.

   d. Billed to Host: Billed to Host refers to Schedule PUBLIC GIR charges billed to the Site Host for all energy consumed through the Green Shuttle Project Facilities.

GRID INTEGRATED RATE

SPECIAL CONDITIONS (Continued)

4. Meter Reads: If due to unusual conditions or reasons beyond the Utility's control, all or part of the data needed to bill a customer's charging through Green Shuttle Project Facilities is not available at the time of billing, a partial bill will be sent and the remaining portion will be billed when the metering data becomes available.

5. Multiple/Summary Accounts: For customers with multiple accounts, summary billings, or multiple meters at a premise, the billing charges are calculated for each individual qualifying meter and applied, if applicable, to the corresponding service account.

6. Terms of Service: A customer receiving service under this schedule may elect to change to another applicable rate schedule but only after receiving service on this schedule for at least 12 consecutive months.

7. Voltage: Service under this Schedule will be supplied at the standard lighting voltage.

8. PCIA Recovery in Bundled EECC Rates: Bundled Service customers EECC rates include an amount to recovery the above-market portion of SDG&E's generation portfolio. This above-market portion is referred to as the Power Charge Indifference Adjustment (PCIA) amount and is shown on Bundled Service customers' bills under the Breakout of Current Charges panel and embedded in Electric Generation charges N N

GRID INTEGRATED RATE N

EECC SPECIAL CONDITIONS

1. Definitions: The definitions of principle terms used in this schedule are found either herein or in Rule 1, Definitions.

2. Service Restrictions: Service under this schedule is restricted to the entire load served by single meters. The electric load of a single meter may not be partitioned among services rendered under this schedule and services rendered by a non-utility party under Direct Access or Community Choice Aggregation (CCA).

3. Terms of Service: A customer receiving optional service under this Schedule may elect to change to another applicable rate schedule, but only after receiving service on this Schedule for at least 12 consecutive months, except as specified in EECC Special Condition 4. If a customer elects to discontinue service on this Schedule, the customer will not be permitted to return to this Schedule for a period of one year, unless returning to service from a Direct Access Provider or a Community Choice Aggregator (CCA) in less than one year. T

4. Early Termination: An eligible customer may elect to take commodity from a Direct Access provider or from a CCA during its Term of Service granted it has complied with all other applicable tariff requirements, including, but not limited to the terms and conditions set forth in Rules 25.1 and 27, respectively.

5. TOU Period Grandfathering: Pursuant to D.17-01-006 and D.17-10-018 TOU Period Grandfathering permits certain eligible behind-the-meter solar customers to continue billing under grandfathered TOU period definitions after new TOU Periods are implemented, for a specific period of time.

   TOU Period Grandfathering Eligible Customer Generator (Non-Residential): A non-residential customer with an on-site solar system, who has filed an initial interconnection application by January 31, 2017. The on-site solar system must be designed to offset at least 15% of the customer's current annual load. For Public Agency customers, defined here as public schools, colleges and universities; federal, state, county and city government agencies; municipal utilities; public water and/or sanitation agencies; and joint powers authorities, the non-residential account must have filed an initial interconnection application by December 31, 2017.

   TOU Period Grandfathering Term (Non-Residential): Upon SDG&E's implementation of updated TOU periods adopted in D.17-08-030, TOU Grandfathering Eligible Customer Generators will continue to be billed under prior existing TOU periods and resulting rates for the remainder of their applicable TOU Grandfathering Term, which begins upon issuance of a permission to operate customer's on-site solar system and continues for 10 years. In no event shall the duration of a customer's grandfathering term extend beyond July 31, 2027 (December 31, 2027 for schools). Upon expiration of a customer's TOU Period Grandfathering Term, the customer will be billed using his otherwise applicable TOU periods and associated rates beginning with the customer's next billing cycle.

6. PCIA Recovery in Bundled EECC Rates: Bundled Service customers on Schedule EECC rates include an amount to recover the above-market portion of SDG&E's generation portfolio. This above-market portion is referred to as the Power Charge Indifference Adjustment (PCIA) amount and is shown on Bundled Service customers' bills under the Breakout of Current Charges panel and embedded in Electric Generation charges.
