Schedule NSEC Sheet 1
NON-STANDARD EXPORT COMPENSATION

APPLICABILTY

This Schedule applies only to Bundled Service Customers who have submitted an Interconnection Request (as defined in SCE's Rule 21) after December 31, 2023 to interconnect a new Renewable Electrical Generating Facility, or to make modifications to an existing Renewable Electrical Generating Facility, including adding battery storage, under tariffs adopted pursuant to Public Utilities (PU) Code 2827 and 2827.1 (i.e., Schedules NEM, NEM-ST, NBT, NEM-V, NEM-V-ST, NBT-V, MASH-VNM, MASH-VNM-ST or SOMAH-VNM, including any sub-tariffs) for which the Department of Industrial Relations have determined that Customer's contractor have willfully violated the prevailing wage requirements set forth in Public Utilities (PU) Code 769.2 during the construction of the Customer's Renewable Electrical Generating Facility. Pursuant to PU Code Section 769.2 and California Public Utilities Commission (CPUC) Decision (D.)23-11-068, if the Customer's contractor is found to have willfully violated Section 769.2 of the PU Code by failing to pay its workers a prevailing wage, the Customer's Renewable Electrical Generating Facility is ineligible to participate in any schedule developed pursuant to PU Code 2827 or 2827.1. Community Choice Aggregation (CCA), Customer Aggregation (CA) or Direct Access (DA) Customers should refer to their respective energy providers for any compensation for their exports to the grid.

Customers cannot apply for this Schedule. Southern California Edison (SCE) will transition to this Schedule those Customer's Generating Accounts associated with a Renewable Electrical Generating Facility for which Customer's contractor is found in willful violation of PU Code 769.2. Customers will receive a 30- or 60-day notification, as applicable, before a Generating Account is transferred to this Schedule.[i] After the notice period ends, the transfer will occur on the date of the next billing cycle.

Benefitting Accounts associated with a virtual arrangement (which includes customers served under Schedules NEM-V, NEM-V-ST, NBT-V, MASH-VNM, MASH-VNM-ST, or SOMAH-VNM, or a NEM or NBT aggregation sub-tariff) for any Renewable Electrical Generating Facility transitioned to this Schedule due to a contractor's willful violation of PU Code 769.2 will remain on their Otherwise Applicable Tariff (OAT), but will no longer receive any benefits from the Generating Account.

Prior to receiving service under this Schedule, the Renewable Electrical Generating Facility must be interconnected with SCE's grid pursuant to the requirements of SCE's Rule 21. All Customers under this Schedule must ensure their Renewable Electrical Generating Facility complies with safety and performance standards outlined in SCE's Electric Rule 21 and other applicable tariffs. Customers are subject to additional terms and conditions contained herein and any other applicable state or federal laws. Customers will not need to sign a new Interconnection Agreement (as defined in SCE's Rule 21); the terms and conditions of their existing agreement will remain in effect, except that they will not receive billing benefits under PU Code 2827 or 2827.1.

This schedule, similar to contracts established pursuant to federal Public Utility Regulatory Policies Act of 1978, will only compensate Renewable Electrical Generating Facilities up to and including twenty megawatts. (N) | (N)

(L)

[i] Pursuant to D.23-11-068, Customers with a single Generating Account (with no Benefitting Accounts) will receive a 30-day notice. Customers with Generating Accounts with one or more Benefitting Accounts will receive a 60-day notice.

(Continued)

Schedule NSEC Sheet 2
NON-STANDARD EXPORT COMPENSATION

TERRITORY (L)

Within the entire territory served. (L)

RATES

1. Energy Service Rates.

Customers on this Schedule will be billed for all applicable charges based on the Customer's Energy Consumption (import channel of SCE's revenue meter), with payments due according to their OAT.

2. Energy Export Payment Price.

The Energy Export Payment Prices are the prices published in Appendix A (*Prices for Time of Execution Contracts - "As-Executed Option")* of SCE's advice letter "*New Standard Offer Contract Price Terms for Qualifying Facilities 20 Megawatts or Less*" (the SOC AL) submitted to comply with D.20-05-006. The prices shown in the "As Executed Option" are calculated using the three-year average of the CAISO locational marginal prices (LMP) for the SP-15 CAISO trading hub and differentiated by month and Time of Delivery (TOD) periods.

The SOC AL is filed monthly by SCE within 10 days at the start of the calendar month. Energy Export Payment Prices for a calendar month are updated in the SOC AL filed in the following month. For example, September 2024 prices are updated in the SOC AL filed by SCE in October 2024.

TOD periods are defined in Appendix A of the monthly SOC AL and are reflected below:

	Weekdays		Weekends & Holidays	
	Summer	Winter	Summer	Winter
On-Peak	4 p.m. - 9 p.m.	N/A	N/A	N/A
Mid-Peak	N/A	4 p.m. - 9 p.m.	4 p.m. - 9 p.m.	4 p.m. - 9 p.m.
Off-Peak	All hours except 4 p.m. - 9 p.m.	9 p.m. - 8 a.m.	All hours except 4 p.m. - 9 p.m.	9 p.m. - 8 a.m.
Super-Off Peak	N/A	8 a.m. - 4 p.m.	N/A	8 a.m. - 4 p.m.

Holidays are: New Year's Day (January 1), Presidents' Day (third Monday in February), Memorial Day (last Monday in May), Independence Day (July 4), Labor Day (first Monday in September), Veterans Day (November 11), Thanksgiving Day (fourth Thursday in November), and Christmas (December 25). When any Holiday falls on Sunday, the following Monday will be recognized as a Holiday. No change will be made for Holidays falling on Saturday.

The Summer Season shall commence at 12:00 a.m. on June 1 and continue until 12:00 a.m. on October 1 of each year. The Winter Season shall commence at 12:00 a.m. on October 1 of each year and continue until 12:00 a.m. on June 1 of the following year.

(Continued)

Schedule NSEC Sheet 3
NON-STANDARD EXPORT COMPENSATION

RATES (Continued)

3. Standby and Customer Generation Departing Load Charges.

Generating Accounts served under this Schedule are also subject to standby and departing load charges based on their OAT, applicable Standby schedule and/ or applicable Departing Load schedule (i.e., Schedules S, TOU-8-S, TOU-8-RTP-S, CGDL-CRS, and/or DL-NBC).

SPECIAL CONDITIONS

1. Compensation Term.

A Customer's Renewable Electrical Generating Facility will remain on this Schedule until the California Public Utilities Commission (CPUC) develops a successor tariff or directs these Customers to another tariff, or the Customer enrolls into an eligible tariff (other than tariffs developed pursuant to PU Code 2827 or 2827.1) or enters into a Power Purchase Agreement which compensates Customer for their eligible Energy Exports.

If the Department of Industrial Relations nullifies or reverses a willful wage violation for the Renewable Electrical Generating Facility, the Customer's Generating Account (and associated Benefitting Accounts, if any) will be transitioned back to the applicable NEM or NBT tariff on the next scheduled read date. If the contractor's willful violation is reversed and the Customer's Generating Account (and associated Benefitting Accounts, if any) are transitioned back to the applicable NEM/NBT tariff, the Customer's original legacy period on the applicable NEM or NBT tariff will continue without restarting. The applicable NEM/NBT tariff legacy period is established in the relevant tariff and sub-tariff and runs from the Customer's original Permission to Operate (PTO) date.

(Continued)

Schedule NSEC Sheet 4
NON-STANDARD EXPORT COMPENSATION

SPECIAL CONDITIONS (Continued)

2. Metering Requirements.

a. For Load Serving Renewable Electrical Generating Facilities.

Energy Consumption and Energy Exports will be metered using a single Time-of-Use (TOU) meter capable of separately registering the flow of energy in 15-minute intervals and in two directions: one channel of the meter will register the Customer's consumption of energy from SCE's grid (Energy Consumption), and a separate channel will register the energy produced by the Customer's Generating Facility and exported to SCE's grid (Energy Exports). If the Customer's existing meter is not a TOU meter capable of performing these measurements, an appropriate TOU meter will be provided at the Customer's expense. Customers who refuse the installation and use of such a TOU meter are not eligible for service under this Schedule and must submit an Interconnection Request under the Non-Export provisions of SCE's Rule 21.

SCE may choose to install additional meters at SCE's expense, with the Customer's consent. These additional meters will only be used to provide the information necessary to accurately bill or credit the Customer. If additional meters are required and the Customer does not grant authorization, SCE has the right to refuse interconnection.

b. For Non-Load Serving Renewable Electrical Generating Facilities.

At the time of the original Interconnection Request under Schedules NEM-V, NEM-V-ST, NBT-V, MASH-VNM, MASH-VNM-ST, or SOMAH-VNM, or, if applicable, the aggregation sub-tariff of Schedules NEM, NEM-ST, or NBT, the Customer is responsible for all costs associated with installing a generation output meter (GOM) on each Renewable Electrical Generating Facility. The GOM must be capable of recording generator output in 15-minute intervals and measuring the flow of energy in two directions at the point where each Renewable Electrical Generating Facility transfers energy to SCE's grid (the Generating Account). Only incidental loads related to the inverters and support of the Renewable Electrical Generating Facility may be registered on the meter. SCE must approve the location of the GOM equipment, which will typically be grouped with the service and any metering equipment.

c. Non-Photovoltaic (PV) Solar.

If the Renewable Generator(s) uses solar technology other than PV, the Customer must follow the metering and billing requirements for Paired Storage Systems, as described in the originating NEM or NBT Schedule.

(Continued)

Schedule NSEC Sheet 5
NON-STANDARD EXPORT COMPENSATION

SPECIAL CONDITIONS (Continued)

3. Billing.

The following billing processes apply to Customers served under this Schedule.

a. Energy Information.

SCE will provide all Customers with information on Energy Consumption, Energy Exports, energy service charges and Energy Export Payments within each monthly bill. This information will detail the Customer's monthly energy charges and compensation.

b. Energy Service Charge.

Customers on this Schedule will be billed for all applicable charges according to their OAT.

c. Energy Export Payments.

i. Energy Exports from Renewable Electrical Generating Facilities previously enrolled in a NEM or NBT tariff and transitioned to this Schedule will no longer be eligible for compensation under the NEM/NBT tariffs. Instead, compensation will be provided pursuant to this Schedule. Only Energy Exports that were eligible for compensation under the applicable NEM/NBT tariff will be compensated under this Schedule.

ii. SCE will compensate the Customer's Renewable Electrical Generating Facility for the applicable Energy Exports using the meter reads from the GOM (in kWh) or the net generation channel (export channel of SCE retail meter, in kWh), differentiated by TOD period, multiplied by the applicable Energy Export Payment Price as published in SCE's most recent monthly SOC AL. The link to the most recent SOC AL can be found at SCE_Current_PURPA_Price_AL.pdf.

iii. Credits will be based on exports from the previous bill period. For example, if the current billing period for Energy Charges on the OAT is from October 3, 2024, to November 2, 2024, the Energy Export Payment period will be based on the previous billing period from September 2, 2024, to October 2, 2024.

iv. Use of Energy Export Payments. For all Customers served under this Schedule, the value (in $) of Energy Export Payments for Energy Exports (as calculated in this Billing Section 3.c.ii) will be used to offset any charges applicable to the Customer's OAT. Any remaining credit will rollover to the future billing period until all credits have been fully used.

(Continued)

Schedule NSEC Sheet 6
NON-STANDARD EXPORT COMPENSATION

SPECIAL CONDITIONS (Continued)

3. Billing. (Continued)

c. Energy Export Payments. (Continued)

v. There is no Relevant Period (as defined in the originating NEM or NBT tariff) for customers served under this Schedule.

vi. Tax Reporting. The total amount of Energy Export Payments (in $) received by the Customer on any calendar year is subject to applicable Internal Revenue Service reporting and taxation requirements. Customers will be required to provide the appropriate Tax Identification Number (TIN) for this purpose.

4. New Customer or Record or New Party In (NPI).

Pursuant to PU Code 769.2, penalties for a willful wage violation are assessed against the Renewable Electrical Generation Facility and any associated battery storage. A new Customer of Record or NPI who owns, rents, or leases a premises with a Renewable Electrical Generating Facility transitioned to this Schedule will continue to be ineligible for participating in any schedule developed pursuant to PU Code 2827 or 2827.1 (currently NEM or NBT) and will receive Energy Export Payments pursuant to this Schedule under the same requirements as the original Customer of Record.

An NPI who owns, rents, or leases Premises with a Renewable Electrical Generating Facility approved by SCE for Parallel Operation (as defined in SCE's Rule 21) and transitioned to this Schedule prior to the new Customer or NPI taking electric service from SCE will not need to submit a new Interconnection Request or sign a new Interconnection Agreement.

The new Customer will continue to take service under this Schedule as long as the requirements are met. The new Customer or NPI must:

a. Ensure the Renewable Electrical Generating Facility complies with all applicable safety and performance standards as outlined in SCE's Rule 21 and other relevant tariffs.

b. Maintain the same amount of property, commercial general liability, and/or personal liability insurance that was in place when the service under this Schedule was initiated.

c. Understand that SCE may release information (in accordance with the Required Disclosure provisions of SCE's Rule 21, Section D.7.d, and the Required Disclosure section of this Schedule) to the CPUC or the California Energy Commission (CEC) regarding the new Customer or NPI's Generating Facility, including the name, location, capacity, and operational characteristics of the Renewable Electrical Generating Facility.

(Continued)

Schedule NSEC Sheet 7
NON-STANDARD EXPORT COMPENSATION

SPECIAL CONDITIONS (Continued)

5. Modifications.

Renewable Electrical Generating Facilities participating on this Schedule may make modifications or repairs as long as the modifications and/or repairs do not increase the capacity of the Renewable Electrical Generating Facility by more than the greater of (1) 10 percent of the Renewable Electrical Generating Facility's nameplate rating capacity, as established when the Renewable Electrical Generating Facility was originally interconnected, or (2) 1 kW.

a. Customers making modifications and/or additions to their Renewable Electrical Generating Facilities that exceed the greater of 10 percent and 1 kW limit, as referenced above, have the option of either (a) interconnecting the additions and/or modifications separately under a Rule 21 non-export agreement (so long as they demonstrate that the expansion uses a non-export relay, or any other control system, to prevent the expansion from exporting to the grid). Modifications under a non-export agreement are subject to the Distribution Upgrade cost responsibility outlined in Rule 21. In any case, these additions are subject to Special Conditions 6 and 7.

b. Non-Load Serving Renewable Electrical Generating Facilities are not eligible for Special Condition 5.a. Proposed expansions or modifications for Non-Load Serving Renewable Electrical Generating Facilities located at the Customer's premises that exceed the greater of 10 percent and 1 kW limit, as referenced above, will need to submit a new Interconnection Request for export under Rule 21 and it is not eligible for participation in this Schedule or any schedule developed pursuant to PU Code 2827 or 2827.1.

6. Multiple Tariff Generating Facilties.

a. For Load Serving Renewable Electrical Generating Facilities: only Renewable Electrical Generating Facilities that have been transitioned to this Schedule will receive compensation under this schedule. All other generating facilities located at the Customer's premises must be interconnected according to a Rule 21 non-export agreement and must use a non-export relay or another control system to prevent them from exporting to the grid.

b. Paired Storage that is not charged by the Renewable Electrical Generating Facility is not eligible for compensation under this Schedule and, as such, it must have a non-export relay or another control system, as per SCE's Rule 21, to prevent the non-export generator from exporting to the grid.

c. Non-Load Serving Renewable Electrical Generating Facilities are not eligible for Special Condition 6.a.

(Continued)

Schedule NSEC Sheet 8
NON-STANDARD EXPORT COMPENSATION

SPECIAL CONDITIONS (Continued)

7. Size to Load Requirements.

To be eligible for service under this Schedule, Customer's Generating Facilities (including all generators) must meet the sizing requirements outlined below. If this Special Condition conflicts with any other Special Condition, the provisions of this Special Condition shall prevail.

a. Size to Load Requirement: To be eligible for service under this schedule, Customer's Generating Facilities (including all generators) must still comply with the sizing requirements from their originating NEM or NBT schedule (absent an attestation procedure described in Schedule NBT).

b. Capacity: Except for the sized-to-load requirement specified above there is no limit on the capacity of a Generating Facility served under this Schedule. However, primarily for the purposes of interconnection, cost responsibility (as outlined in SCE's Rule 21) certain provisions apply differently to Generating Facilities served under this Schedule depending on whether they have a capacity of (1) 1 MW or less or (2) greater than 1 MW. For Renewable Electrical Generating Facilities, both the CEC-AC rating, as applicable, and the aggregate inverter capacity must not be greater than 1 MW for a Generating Facility to be considered 1 MW and smaller. The capacity of each generator will be determined by using the "System Size Limiting Factor" table within SCE's Rule 21, Section F, which, for solar systems, is the lesser of inverter name plate capacity (in kW) or the CEC-AC rating. The aggregate nameplate capacity of the facility is calculated by adding the capacity of all generators located at the Customer's Premises (including Integrated or Directly Connected Energy Storage Devices, if any). If the modification is increased under Rule 21 non-export, regardless of generation source, the expansion will be evaluated under Rule 21 and the Customer will be responsible for Distribution Service Upgrades required by the modification.

(Continued)

Schedule NSEC Sheet 9
NON-STANDARD EXPORT COMPENSATION

SPECIAL CONDITIONS (Continued)

8. Definitions.

Except as otherwise defined in SCE's Rule 1, capitalized terms utilized in the context of this Schedule are defined below and applicable to Customers, as applicable, receiving service under this Schedule.

a. Benefitting Account. Each SCE Customer account that was previously allocated energy (kWh) or credits ($) from a Generating Account under NEM or NBT Schedules that were developed pursuant to PU Code 2827 or 2827.1.

b. Bundled Service. As defined in SCE'S Rule 1.

c. Energy Consumption. The amount of electricity (in kWh) that is consumed/imported from the grid by the Customer, as measured by SCE metering equipment (import channel) in each metered interval (e.g., 15-minute).

d. Energy Export. The amount of electricity (in kWh) that is generated by the Generating Facilities and exported to the grid, as measured by SCE's generation output metering (GOM) equipment or the SCE metering equipment (export channel) in each 15-minute metered interval.

e. Generating Account. The account to which an eligible Load Serving or Non-Load Serving Renewable Electrical Generating Facilities is interconnected with SCE.

f. Load Serving Renewable Electrical Generating Facilities. These are Renewable Electrical Generating Facilities intended to offset existing load at the Customer's premises and behind the same SCE's retail meter. These may include Renewable Electrical Generating Facilities that previously participated in the aggregation sub-tariff of Schedule NEM, NEM-ST or NBT.

g. New Party In (NPI). A new Customer of Record who owns, rents or leases a Premises that includes a Renewable Electrical Generating Facility that was approved by SCE for Parallel Operation (as defined in SCE's Rule 21) and transitioned to this Schedule.

h. Non-Load Serving Renewable Electrical Generating Facilities. These are Renewable Electrical Generating Facilities that are interconnected behind a Generation Output Meter and do not serve existing Customer's load located behind the same GOM or SCE retail meter, as in Schedule NEM-V, NEM-V-ST, MASH-VNM, MASH-VNM-ST or SOMAHVNM. These may include Renewable Electrical Generating Facilities that previously participated in the aggregation sub-tariff of Schedules NEM, NEM-ST or NBT.

(Continued)

Schedule NSEC Sheet 10
NON-STANDARD EXPORT COMPENSATION

SPECIAL CONDITIONS (Continued)

8. Definitions. (Continued)

i. Otherwise Applicable Tariff (OAT). The Customer's regularly filed rate schedule under which service is rendered.

j. Paired Storage System. A Generating Facility that includes a Renewable Generator(s) and an Integrated or Directly Connected Energy Storage Device(s) behind the same SCE revenue meter and/or Service Account. Integrated or Directly Connected Energy Storage Devices are considered an addition or enhancement to the Renewable Generator and not a separate generating facility for the purpose of applying the cost exemptions specified in Special Condition 5.b above when interconnecting at the same time as the Renewable Generator.

An energy storage device shall be considered an addition or enhancement to the Renewable Generator if the energy storage device is either:

i. Integrated into the Generating Facility, such that the energy storage device is capable of storing only energy produced by the Renewable Generator, either as an intermediary form of energy during the generation cycle or after electricity has been generated (Integrated Energy Storage Device); or,

ii. Directly connected to the Generating Facility, such that electricity is delivered from the Renewable Generator to the energy storage device behind the meter used for RPS purposes and any electricity from a source other than the Renewable Generator is included as an energy input to the Generating Facility; the energy storage device must be operated as part of the Generating Facility represented in the application and not in conjunction with any other facility, renewable or otherwise (Directly Connected Energy Storage Device). As such, a Directly Connected Energy Storage Device is not required to be charged exclusively from the Renewable Generator and may also be charged from the grid.

k. Permission to Operate Notice (PTO, or PTO notice). SCE's written approval authorizing Customer to commence parallel operation of the Generating Facility or approving Customer's proposed modifications of the Generating Facility. The date that SCE provides the Customer with the original PTO to commence parallel operation of the Generating Facility is referred to as the Original PTO Date. A Customer may receive subsequent PTO notices after the original PTO following Customer's requests for modifications to the Generating Facilities.

l. Non-Standard Export Compensation Applicable Renewable Electrical Generating Facilities. Renewable Electrical Generating Facilities that were found in willful violation of PU Code 769.2 (Prevailing Wage) by the Department of Industrial Relations.

(Continued)

Schedule NSEC Sheet 11
NON-STANDARD EXPORT COMPENSATION

SPECIAL CONDITIONS (Continued)

8. Definitions. (Continued)

m. Renewable Electrical Generating Facilities. A facility that generates electricity from a renewable source listed below pursuant to paragraph (1) of subdivision (a) of Section 25741 of the Public Resources Code.

Technologies using renewable sources include biomass, solar thermal, photovoltaic, wind, geothermal, fuel cells using renewable fuels, small hydroelectric generation, digester gas, municipal solid waste conversion, landfill gas, ocean wave, ocean thermal, or tidal current, and any additions or enhancements to the facility using that technology.

i. Paired Storage is further defined in the CEC RPS Guidebook as an enhancement to the Renewable Electrical Generating Facility if the Paired Storage system is Integrated or Directly Connected to the Renewable Electrical Generating Facility.

REQUIRED DISCLOSURE

All Customers must: Accept that SCE may release to the CEC, the CPUC, and/or other state agencies, information regarding the Customer's facility, including such Customer's name and Renewable Electrical Generating Facility location, capacity, and operational characteristics. Pursuant to CPUC Decisions 14-11-001, 21-06-026, and 23-11-068, SCE is required to provide certain data, including, but not limited to, confidential Customer information, to the CPUC, its contractors, the California Department of Consumer Affairs Contractors State License Board, the California Department of Financial Protection & Innovation, and the California Department of Industrial Relations. As a condition of receiving service under this tariff, the eligible Customer authorizes SCE to release any and all information provided in the Interconnection Request to the entities identified above without further notification or consent. For Renewable Electrical Generating Facilities that are subject to PU Code § 769.2, in addition to consenting to SCE sharing the data or information with those regulatory entities, Customer also consents to those entities making that information publicly available.
