DAVID W. HANSON
Interim General Manager

DATE: August 10, 2026

SUBJECT: Energy Cost Adjustment Expenditures for the 12-Month Period Commencing October 1, 2026

SUMMARY

The attached Resolution approves expenditures for inclusion in the Energy Cost Adjustment (ECA) for the 12-month period commencing October 1, 2026. ECA is one of the rate components that recover costs of providing electric service to customers. These costs include fuel, non-renewable purchased power, energy efficiency, and the production and acquisition of power from renewable resources.

City Council approval is not required.

RECOMMENDATION

It is recommended that the Board of Water and Power Commissioners (Board) adopt the attached Resolution authorizing fuel, purchased power, Demand-Side Management (DSM), and Renewable Portfolio Standard (RPS) expenditures for use in the calculation of the ECA factor for the 12-month period commencing October 1, 2026.

FINANCIAL INFORMATION

Electric Rate Ordinance No. 168436, as amended (Ordinance), and the Incremental Electric Rate Ordinance No. 184133 state that the Energy Cost Adjustment Factor (ECAF), Variable Energy Adjustment (VEA) Factor, Capped Renewable Portfolio Standard Energy Adjustment (CRPSEA) Factor, and the Variable Renewable Portfolio Standard Energy Adjustment (VRPSEA) Factor shall be calculated four times a year, and each such calculated factor shall take effect on January 1, April 1, July 1, and October 1, respectively. The ECAF calculated with the expenditures approved in this Resolution and the associated incremental factors take effect on October 1, 2026. In accordance with the two Ordinances, the next quarterly factors update would be effective January 1, 2027.

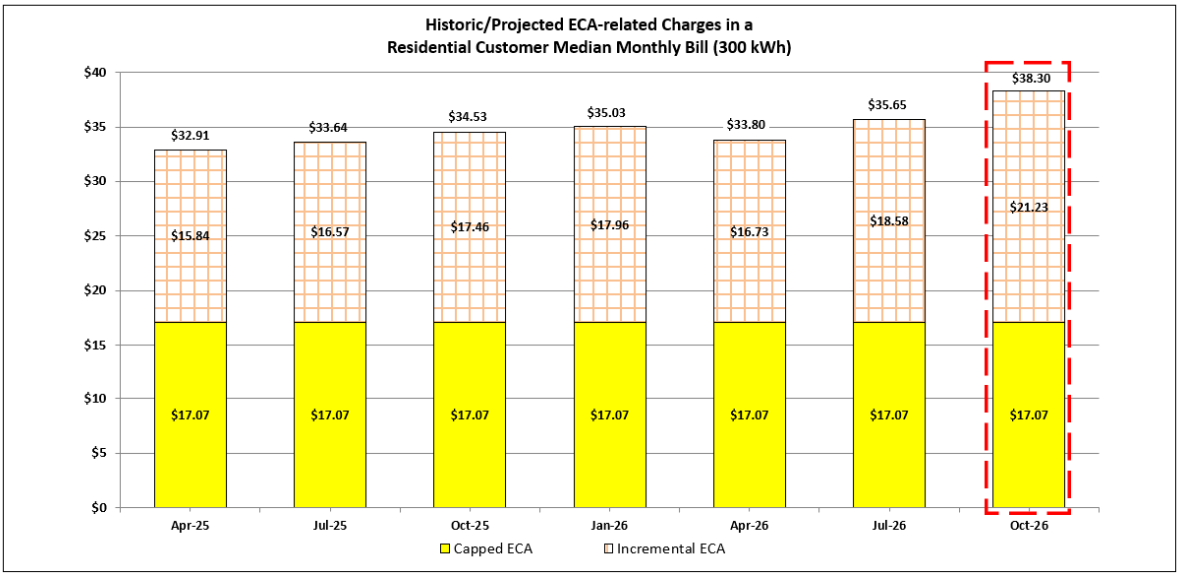

If the attached Resolution is approved, compared against the current quarter, the median residential customer's electric bill (300 kilowatt-hours [kWh] per month) for the quarter commencing October 1, 2026, will be higher by an average of 7.44 percent, or $2.65 per month, or $0.00884 per kWh. The variance against the current quarter is mainly due to an increase in Non-Renewable Purchased Power expense and increases in the VEA and VRPSEA balancing accounts.

Composite ECAF (Proposed vs. Prior Quarter)

For the three-month period commencing October 1, 2026, the composite ECAF applied to actual billing of customers will be $0.12769 per kWh, as shown in the table below, if the Resolution is approved. Calculations of the four factors that make up the composite factor and supporting detail are included in Schedules A, B, C, and D as Attachment B. This increase of $0.00884 per kWh will result in an increase of $2.65 per month for the median residential customer.

Schd.	Energy Cost Adjustment Factors ($/kWh)	Proposed Oct - Dec 2026	Prior Quarter Jul - Sep 2026	Variance
A.1	Ordinance No. 168436, as amended			
	Capped Energy Cost Adjustment Factor	$0.05690	$0.05690	$0.00000
	Incremental Ordinance No. 184133			
A.2	Variable Energy Adjustment Factor	$0.01590	$0.01071	$0.00519
A.3	Capped RPS Energy Adjustment Factor	$0.01973	$0.01817	$0.00156
A.4	Variable RPS Energy Adjustment Factor	$0.03516	$0.03307	$0.00209
	Composite Energy Cost Adjustment Factor	$0.12769	$0.11885	$0.00884

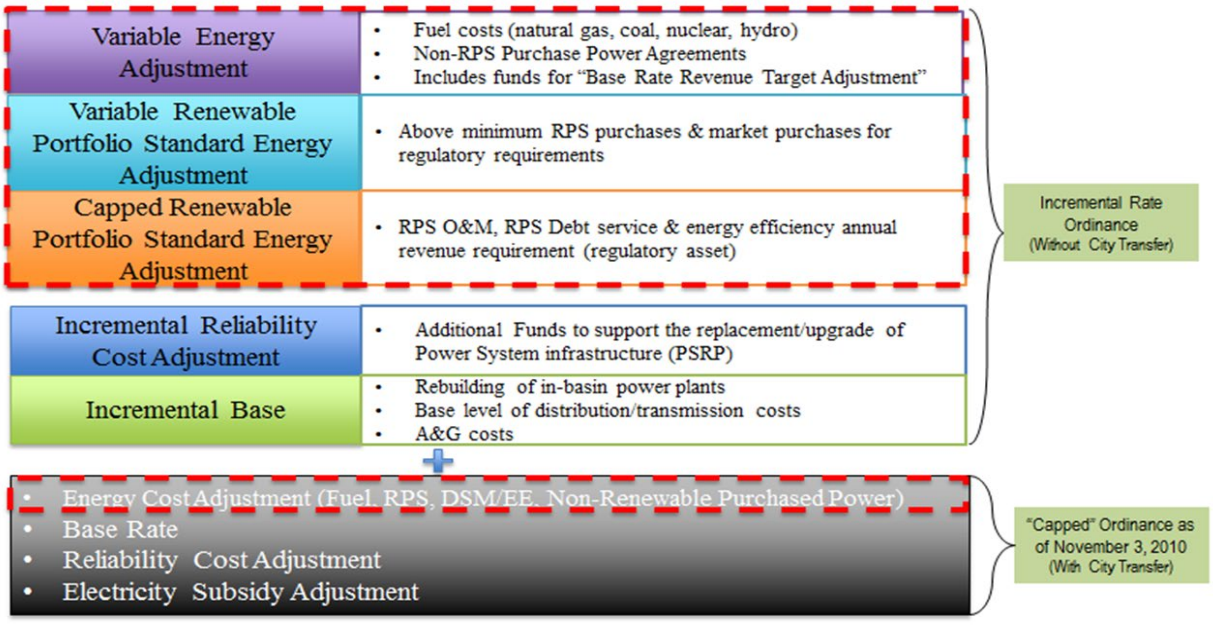

The following chart shows the trend of the historic/projected ECA-related charges in a residential customer median monthly bill (300 kWh).

BACKGROUND

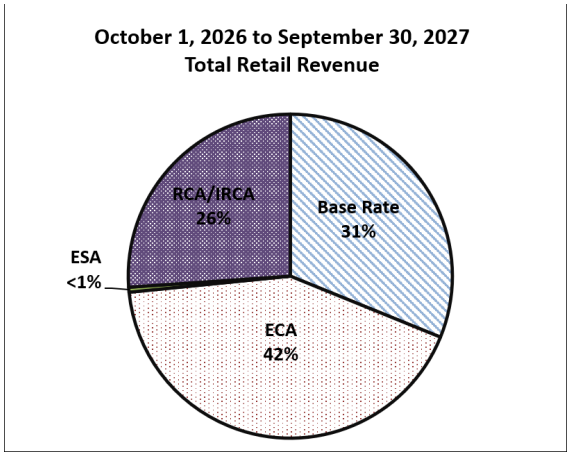

Overview of Electric Rates and ECAF Charges

The current electric rate structure includes a "capped" and incremental rate ordinance.

The proposed expenditures that are to be approved under this Board package will impact the charges shown in the dashed boxes of the figure above, which are collectively referred to as the ECAF charges. Further description of the ECAF-related adjustment factors is provided in Attachment A.

The pass-through adjustments shown in the top dashed box, which include the VEA, CRPSEA, and VRPSEA, along with the “capped” ECA, will provide approximately 42 percent of the total retail revenue for the Power System, as shown in the lower box. The remaining revenue comes from base rates, the fixed Electric Subsidy Adjustment, the Reliability Cost Adjustment, and the Incremental RCA.

The Ordinance specifies that Board approval of the estimated fuel, purchased power, DSM, and RPS expenditures for the 12-month period commencing October 1, 2026, is required for inclusion of those expenditures in the calculation of the quarterly ECA to be effective October 1, 2026.

ENVIRONMENTAL DETERMINATION

Determine item is exempt pursuant to California Environmental Quality Act (CEQA) Guidelines Section 15060 (c)(3). In accordance with Section 15060 (c)(3) of the CEQA Guidelines, an activity is not subject to CEQA if it does not meet the definition of a project in Section 15378. Section 15378 (b)(4) states that governmental fiscal activities which do not involve any commitment to any specific project which may result in a potentially significant physical impact on the environment do not meet the definition of a project. Therefore, the approval of the listed expenditures for ECA is not an action subject to CEQA.

CITY ATTORNEY

The Office of the City Attorney reviewed and approved the Resolution as to form and legality.

ATTACHMENTS

- Attachment B - Schedules A, B, C, and D

RESOLUTION NO. 027 035

WHEREAS, Electric Rate Ordinance No. 168436, as amended, provides for the recovery of qualifying expenditures for costs of fuel, purchased power, Demand-Side Management (DSM), and the Renewable Portfolio Standard (RPS) through the application of the Energy Cost Adjustment Factor (ECAF); and

WHEREAS, Incremental Electric Rate Ordinance No. 184133 further provides for the recovery of qualifying expenditures through the application of the Variable Energy Adjustment Factor (VEAF), Capped Renewable Portfolio Standard Energy Adjustment Factor (CRPSEAF), and Variable Renewable Portfolio Standard Energy Adjustment Factor (VRPSEAF); and

WHEREAS, Electric Rate Ordinance No. 168436, as amended, and Incremental Electric Rate Ordinance No. 184133 state that the ECAF, VEAF, CRPSEAF, and VRPSEAF shall be calculated four times each year, and each such calculated factor shall take effect on January 1, April 1, July 1, and October 1, respectively; and

WHEREAS, the ECAF formula in Electric Rate Ordinance No. 168436, as amended, calls for expenditures to be approved in advance by the Board of Water and Power Commissioners (Board) for inclusion in components of the Energy Cost Adjustment (ECA).

NOW, THEREFORE, BE IT RESOLVED that the Board approves Schedules B, C, and D, which are on file with the Secretary of the Board and which describe and identify estimated non-renewable fuel expense totaling $321 million and non-renewable purchased power expense totaling $612 million on Schedule B, estimated RPS expense totaling $1,099 million on Schedule C, and estimated DSM expense totaling $151 million on Schedule D for the 12-month period commencing October 1, 2026, through September 30, 2027, for inclusion in components of the ECA.

I HEREBY CERTIFY that the foregoing is a full, true, and correct copy of a Resolution adopted by the Board of Water and Power Commissioners of the City of Los Angeles at its meeting held Sept 8, 2026

Shanti L. Mitchell

Secretary

DESCRIPTION OF ECAF-RELATED RATE COMPONENTS

Capped Energy Cost Adjustment Factor (CECAF)

The Electric Rate Ordinance No. 168436, as amended (Ordinance), charges customers the Energy Cost Adjustment (ECA), using the ECA Factor (ECAF), to recover the costs of fuel, purchased power including renewable resources, and demand-side management (DSM) costs, including revenue losses and other variable operational costs.

The Incremental Electric Rate Ordinance No. 184133 designates this ECAF as the CECAF and caps it at $0.05690 per kilowatt-hour (kWh) for billing purposes.

Incremental Energy Factors

The CECAF, in conjunction with the base rate contribution of $0.01236 per kWh, is not sufficient to recover all qualifying expenditures, particularly as expenditures for renewable portfolio standard (RPS) projects continue to increase to meet the State of California's mandated renewable energy goal of 60 percent by 2030. To recover qualifying expenditures above the capped billing level of $0.06926 ($0.05690 + $0.01236) per kWh, Ordinance No. 184133 contains the Variable Energy Adjustment (VEA) Factor, Capped Renewable Portfolio Standard Energy Adjustment (CRPSEA) Factor, and Variable Renewable Portfolio Standard Energy Adjustment (VRPSEA) Factor.

These elements are described below:

(1) VEA Factor

This factor allows for recovery of expenditures for non-renewable fuel, non-renewable purchased power, and legal costs, judgments, and settlements, which are beyond the cost recovery ability of the CECAF and contribution from the base rates. Details of such amounts include:

- Non-renewable fuel-related expenses may include prepayment, fuel transportation, storage, emission credits and taxes, emission allowance costs, and any other non-renewable fuel-related expenses.

- Non-renewable purchased power expense includes charges associated with the purchase of non-renewable energy, including capacity, associated transmission service, prepayment expense, and parallel generators.

- The Base Rate Revenue Target Adjustment (BRRTA) recovers or credits the base rate revenue that is below or exceeds a preset target established by the Board. This factor facilitates aggressive Energy Efficiency programs by ensuring a set amount of revenue collection for the fiscal year irrespective of the sales volume.

(2) CRPSEA Factor

This factor allows for recovery of expenditures for RPS projects directly owned by LADWP, recovery of debt service and operation and maintenance expenses for RPS projects indirectly owned by LADWP, and recovery of expenditures for DSM measures, which are beyond the cost recovery ability of the CECAF and contribution from the base rates. Details of such amounts include:

- Directly owned RPS projects include depreciation, interest, and operation and maintenance expenses.

- Indirectly owned RPS projects include principal payment, interest expense, and operation and maintenance expense. Other expenses of indirectly owned RPS projects are to be recovered through the VRPSEA Factor.

- DSM measures include both expensed and capitalized expenses of energy efficiency measures.

(3) VRPSEA Factor

This factor allows for recovery of expenditures for RPS projects in which LADWP has no ownership interest and recovery of some expenditures for RPS projects in which LADWP has indirect ownership interest, which are beyond the cost recovery ability of the CECAF and contribution from the base rates. Details of such amounts include:

- RPS projects in which LADWP has no ownership interest include purchased generation and its associated transmission service expense.

- RPS projects in which LADWP has indirect ownership interest include expenses other than principal payment, interest expense, and operation and maintenance expense.

Schedule A

Energy Cost Adjustment Factors
(Capped and Incremental)
Calculation Summary Sheet
2nd Quarter of FY 2026-2027

ECAF Calculations for the
Capped Energy Cost Adjustment Factor (CECAF)

Estimated Expenses for the 12-Month Period Commencing October 1, 2026:

(a)	Non-Renewable Fuel Expense	$ 321,371,000
(b)	Non-Renewable Purchased Power Expense	612,213,000
(c)	Renewable Portfolio Standard Expense (Purchase & Ownership)	1,098,730,934
(d)	Demand Side Management (DSM) O&M Expense	0
	DSM Capitalized Debt Service (Includes PY Debt Service)	151,150,280
(e)	Energy Efficiency Savings	106,097,669
(f)	City Transfer (8%)	183,165,031
	Total Estimated Expenses, plus City Transfer	**$ 2,472,727,914**
(g)	Estimated Balance in the ECA Account as of June 30, 2026	6,547,075,256
