Schedule SPSS Sheet 1
STATION POWER SELF-SUPPLY

APPLICABILITY

Applicable to eligible customers receiving retail service from SCE for Station Power purposes and who have Generating Units operating under the CAISO Station Power Protocol (SPP), which allows the customer to self-supply Station Power load through On-Site Self-Supply pursuant to the SPP and this Schedule. Customers served under this Schedule are not eligible for Net Billing Tariff or Net Energy Metering.[1/] (T)

Only Station Power loads associated with Generating Units in the CAISO control area that are part of a CAISO approved Station Power Portfolio may self-supply load for customers served under this Schedule.

TERRITORY

Within the entire territory served.

RATES

Customers receiving service under this schedule are supplied retail service under an applicable schedule based on the characteristics of the customers Station Power load. In addition, those customers with Generating Units which may supply a portion or all of the customers load requirements are also required to take service under Schedules S, TOU-8-S, or TOU-8-RTP-S. These applicable schedules are referred to collectively as the Otherwise Applicable Tariffs (OAT). Except as described below, all rates and charges of the customers retail OAT schedules continue to apply. Nothing in this Schedule modifies the applicability of the retail schedules under which the customer would otherwise be required to receive service if the customer were not participating in the CAISO SPP. Applicability of departing load charges as provided under Schedule CGDL-CRS and DL-NBC is determined based on the provisions of those schedules and is not impacted by a generating customers participation under this Schedule.

Under the SPP, the CAISO allocates an enrolled customer's load at the end of the Netting Period to an: On-Site Self-Supply Load ID, Remote Self-Supply Load ID, or Third-Party Supply Load ID. A customer generator who only has load allocated to the On-Site Self-Supply Load ID (and thus no load allocated to the Remote Self-Supply Load ID or Third-Party Supply Load ID) is assumed to have self-supplied all of its Station Power needs for purposes of certain FERC jurisdictional transmission charges, as set forth in the SPP and retail transmission charges applicable under the customers OAT.

All other charges applicable under the OAT, including distribution charges for customers taking retail service at distribution voltage, are assessed on the basis of SCE retail metering and in accordance with the OAT.

1/ Includes Schedule NBT and all NEM tariffs: Schedules NEM, NEM-ST, BG-NEM, FC-NEM, MASH-VNM, MASH-VNM-ST, NEM-V and NEM-V-ST. (T)

(Continued)

Schedule SPSS Sheet 2
STATION POWER SELF-SUPPLY

Rates (Continued) (C)

FERC-jurisdictional charges subject to the provisions of this schedule include the Base Transmission Charge and the Transmission Owners Tariff Charge Adjustments (TOTCA).

SPP customers that only have load allocated to the On-Site Self-Supply Load ID for the Netting Period are assumed to have zero retail metered consumption for purposes of FERC-jurisdictional transmission charges, and SCE assesses a Base Transmission Charge and TOTCA of zero for the billing cycle.

SPP customers that have load allocated to the Remote Self-Supply Load ID or Third-Party Supply Load ID are assumed to have received SCE retail transmission service for Station Power and are billed FERC-jurisdictional transmission charges accordingly. SCE assesses the applicable Base Transmission Charge and TOTCA from the customer's OAT based on the sum of load recorded to the Remote Self-Supply Load ID or Third-Party Supply Load ID for the billing cycle.

Utility Retained Generation, the Department of Water Resources (DWR) power charge and all other Delivery Service charge components of the OAT, continue to apply to consumption as measured by the retail service meter, except that customers served at voltages above 50 kV are not subject to Distribution[2/] charges. (C)

SPECIAL CONDITIONS (D)

1. The charges applicable to SPP participants as provided for in this Schedule remain subject to change pending judicial review. Customers requesting service under this Schedule are required to notify SCE of their eligibility prior to receiving service under this Schedule. SCE must receive written CAISO confirmation that the customer is eligible to participate under the CAISO SPP. The confirmation must include the effective date when service under the SPP will begin. Information provided by the applicant to the CAISO is subject to verification by SCE. Refusal or failure of a customer to provide eligibility information acceptable to SCE shall delay the provision of service under this Schedule. (T) (T)

2. A customer applying for service under this Schedule shall submit a signed contract on a form authorized by the Commission for each request for service under this Schedule. Service under this Schedule shall become effective on the next regularly scheduled meter read date following SCE's receipt of the signed contract and compliance with Special Condition 1.

3. Notice of change in Customer's Equipment or Operations: It is the customer's responsibility to notify SCE, in writing, if there is a change in the customer's equipment or operations which may change the customer's eligibility status under Schedule SPSS or under the CAISO SPP.

[2/] Distribution Facilities are non-ISO controlled facilities, generally 66 kV and below, although some higher-voltage facilities have been classified by FERC and the California Public Utilities Commission as distribution. (L) (L)

RATES (Continued)

FERC-jurisdictional charges subject to the provisions of this schedule include the Base Transmission Charge and the Transmission Owners Tariff Charge Adjustments (TOTCA).

SPP customers that only have load allocated to the On-Site Self-Supply Load ID for the Netting Period are assumed to have zero retail metered consumption for purposes of FERC-jurisdictional transmission charges, and SCE assesses a Base Transmission Charge and TOTCA of zero for the billing cycle.

SPP customers that have load allocated to the Remote Self-Supply Load ID or Third-Party Supply Load ID are assumed to have received SCE retail transmission service for Station Power and are billed FERC-jurisdictional transmission charges accordingly. SCE assesses the applicable Base Transmission Charge and TOTCA from the customer's OAT based on the sum of load recorded to the Remote Self-Supply Load ID or Third-Party Supply Load ID for the billing cycle.

Utility Generation, the Department of Water Resources (DWR) energy credit and all other Delivery Service charge components of the OAT, continue to apply to consumption as measured by the retail service meter, except that customers served at voltages at or above 220 kV are not subject to retail Distribution[2/] charges. (T) (T)(C) (T)

SPECIAL CONDITIONS

1. Customers requesting service under this Schedule are required to notify SCE of their eligibility prior to receiving service under this Schedule. SCE must receive written CAISO confirmation that the customer is eligible to participate under the CAISO SPP. The confirmation must include the effective date when service under the SPP will begin. Information provided by the applicant to the CAISO is subject to verification by SCE. Refusal or failure of a customer to provide eligibility information acceptable to SCE shall delay the provision of service under this Schedule. (D)

2. A customer applying for service under this Schedule shall submit a signed contract on a form authorized by the Commission for each request for service under this Schedule. Service under this Schedule shall become effective on the next regularly scheduled meter read date following SCE's receipt of the signed contract and compliance with Special Condition 1.

3. Notice of change in Customer's Equipment or Operations: It is the customer's responsibility to notify SCE, in writing, if there is a change in the customer's equipment or operations which may change the customer's eligibility status under Schedule SPSS or under the CAISO SPP.

[2/] Distribution Facilities are non-ISO controlled facilities, generally 66 kV and below, although some higher-voltage facilities have been classified by FERC and the California Public Utilities Commission as distribution. Customers served at voltages of 220 kV and greater receive a Distribution and Generation voltage discount as described in the OAT rate Schedules. (N) | (N)

SPECIAL CONDITIONS (Continued)

4. Definitions. The following definitions are applicable to service provided under this Schedule.

a) CAISO Netting Period – A calendar month.

b) On-Site Self-Supply Load ID – unique Load identifier assigned by the CAISO for On-Site Self Supply.

c) Otherwise Applicable Tariff (OAT): The regularly filed rate schedule(s) under which retail service is provided and billed (i.e. as defined in SCE Rule 1). (T)

d) Third-Party Supply Load ID – unique Load identifier assigned by the CAISO for Third Party Supply.

e) Remote Self-Supply Load ID- A Load ID established by the CAISO and assigned to the Station Power Portfolio's Scheduling Coordinator.

f) Station Power – Energy for operating electric equipment, or portions thereof, located on the Generating Unit site owned by the same entity that owns the Generating Unit, which electrical equipment is used exclusively for the production of Energy and any useful thermal energy associated with the production of energy by the Generating Unit; and for the incidental heating, lighting, air conditioning and office equipment needs of buildings, or portions thereof, that are owned by the same entity that owns the Generating Unit; located on the Generating Unit site; and used exclusively in connection with the production of energy and any useful thermal energy associated with the production of energy by the Generating Unit. Station Power includes the energy associated with motoring a hydroelectric unit to keep the unit synchronized at zero power output to provide Regulation or Spinning Reserve. Station Power does not include any energy used to power synchronous condensers; used for pumping at a pumped storage facility; or provided during a Black Start procedure. Station Power does not include energy to serve loads outside the ISO Control Area.

g) Station Power Portfolio – One or more generating resources eligible to self-supply such Station power, including Generating Units in the CAISO Control Area, and generating facilities outside the CAISO Control Area, where all such facilities are owned by the same entity.

SPECIAL CONDITIONS (Continued)

5. Bill Calculation: Except as provided for above, bills for electric service will be based on metered consumption. (T)

   Until meter data allocated by the CAISO to the On-Site Self-Supply Load ID, Remote Self-Supply Load ID, and/or Third-Party Supply Load ID are provided to SCE in an acceptable format, either in 5 minute or 15 minute intervals, the customer's monthly billing will be based upon SCE's meter reads. (T)

6. Prior to receiving service under this Schedule, the customer shall provide the necessary consent and Load ID(s) to enable SCE to receive the customer's meter data from CAISO including meter data for load associated with the On-Site Self-Supply Load ID, Remote Self-Supply Load ID, and Third Party Supply Load ID. Such meter data shall be provided in an acceptable format, either in 5 minute or 15 minute intervals, for billing under this Schedule. (T)

7. The customer acknowledges that as a condition for taking service under this Schedule the meter data allocated to the Remote Self-Supply Load ID, and the Third Party Supply Load ID, which is used by SCE as the basis for billing the customer certain FERC-jurisdictional charges included in the customer OAT, is provided to SCE by the CAISO and is not subject to SCE's validation processes for metered data. The customer agrees that for purposes of SCE billing, such meter data provided by the CAISO and allocated to the Load IDs shall be deemed accurate. (T)

Schedule SPSS Sheet 4

SPECIAL CONDITIONS (Continued)

5. Bill Calculation: Except as provided for above, bills for electric service will be based on CAISO metered consumption for all Transmission charges. All other charges will be based on SCE metered consumption. (C) (C)

   Until meter data allocated by the CAISO to the On-Site Self-Supply Load ID, Remote Self-Supply Load ID, and/or Third-Party Supply Load ID are provided to SCE in an acceptable format, either in 5 minute or 15 minute intervals, the customer's monthly billing will be based upon SCE's meter reads.

6. Prior to receiving service under this Schedule, the customer shall provide the necessary consent and Load ID(s) to enable SCE to receive the customer's meter data from CAISO including meter data for load associated with the On-Site Self-Supply Load ID, Remote Self-Supply Load ID, and Third Party Supply Load ID. Such meter data shall be provided in an acceptable format, either in 5 minute or 15 minute intervals, for billing under this Schedule.

7. The customer acknowledges that as a condition for taking service under this Schedule the meter data allocated to the Remote Self-Supply Load ID, and the Third Party Supply Load ID, which is used by SCE as the basis for billing the customer certain FERC-jurisdictional charges included in the customer OAT, is provided to SCE by the CAISO and is not subject to SCE's validation processes for metered data. The customer agrees that for purposes of SCE billing, such meter data provided by the CAISO and allocated to the Load IDs shall be deemed accurate.
