SCHEDULE DYNAMIC EXPORT RATE PILOT

DYNAMIC EXPORT RATE PILOT PROGRAM

APPLICABILITY

This Schedule is an add-on, opt-in commodity tariff (Electric Energy Commodity Cost (EECC) rate schedule) available to customers receiving bundled service (commodity service supplied by San Diego Gas & Electric Company (SDG&E), in addition to delivery service supplied by SDG&E) on Utility Distribution Company (UDC) rate schedules EV-HP, AL-TOU-L, AL-TOU-M, or TOU-A. Customers taking service under this Schedule will continue to be subject to the terms and provisions of their otherwise applicable rate schedule (i.e., EV-HP, AL-TOU-L, AL-TOU-M, or TOU-A). Customers taking service under this Schedule must comply with SDG&E Electric Rule 21.

Customers participating in Net Energy Metering, Net Billing or any dynamic commodity rate (including Critical Peak Pricing), demand response programs (including the Emergency Load Reduction Program), legacy time-of-use rates, or conjunctive billing rates are not eligible for this schedule.

TERRITORY

Applicable throughout the entire territory served by SDG&E.

RATES

Dynamic Export Rate Pilot consists of the hourly commodity credit shown below that consists of two components: (a) California Independent System Operator (CAISO) day-ahead hourly price; and (b) Generation Capacity Component (GCC):

Dynamic Export Rate Pilot: Commodity Credit	
CAISO day-ahead hourly price	updated daily, day-ahead
Generation Capacity Component	
Schedules EV-HP and AL-TOU-M	$0.26190 I
Schedule AL-TOU-L	$0.28865 I
Schedule TOU-A	$0.26474 I

Franchise Fee Differential

A Franchise Fee Differential of 5.78% will be applied to the total bills calculated under this schedule for all customers residing within the corporate limits of the City of San Diego. Such Franchise Fee Differential shall be so indicated and added as a separate item to bills rendered to such customers.

SCHEDULE DYNAMIC EXPORT RATE PILOT

DYNAMIC EXPORT RATE PILOT PROGRAM

SPECIAL CONDITIONS

1. Definitions: The definitions of terms used in this Schedule are found either herein or in Rule 1, Definition.

2. Dynamic Export Rate Pilot: Consists of the sum of two components: (a) CAISO day-ahead hourly price; and (b) the GCC, if applicable. If the Dynamic Export Rate Pilot is ever negative, the rate will be set to $0.00.

   a. CAISO Day-Ahead Hourly Price: Reflect the CAISO day-ahead hourly prices. The effective CAISO day-ahead market hourly prices will be publicly available on the sdge.com website by 6 pm. If the CAISO day-ahead hourly prices are not able to be uploaded by SDG&E by 5 pm for the day-ahead market, the prior day's CAISO day-ahead hourly prices will be the effective CAISO day-ahead hourly prices. CAISO market data posted or corrected after the above cut-off time will not be used for Dynamic Export Rate Pilot calculations and after-the-fact rate adjustments will not be made.

   b. Generation Capacity Component (GCC): The GCC is an adder based on marginal generation capacity costs only. The GCC is added to the top 150 system peak hours on a day ahead basis based on the CAISO day-ahead demand forecast.

3. Billing:

   a. A customer's Dynamic Export Rate Pilot commodity credit will be calculated pursuant to this Schedule. The customer's import consumption and export will be netted at the 15-minute kWh interval to determine if the customer will be billed electricity consumption for imports under the otherwise applicable rate schedule the customer is taking electric service on (e.g., Schedules EV-HP, AL-TOU-L, AL-TOU-M, or TOU-A) or be provided a bill credit for electricity export under this schedule at the kWh interval level. T T

   b. Demand Charges on UDC and EECC Rate Schedules: Demand charges will be based on the demand in kilowatts as measured on the energy being consumed/imported by the customer from SDG&E (Import Channel, all usage).

4. Conjunctive Billing: Reflects customers with multiple meters on a single premise, where interval meter data is combined or subtracted for the purpose of billing.

5. Appropriate Electric Metering: A fifteen-minute interval data recording meter with related telecommunications capability, compatible with SDG&E's meter reading, time-of-use billing, and telecommunications systems will generate interval reads that are of billing quality.

SPECIAL CONDITIONS (Continued) N

6. Voltage: Service under this schedule normally will be supplied at a standard available Voltage in accordance with Rule 2.

7. Enrollment and Timing: Customers that opt-into this schedule will be enrolled at the beginning of their next billing period. The Dynamic Pricing Export Rate Pilot is scheduled to begin on January 1, 2025, and will conclude 24-months after pilot enrollment begins. At commencement of the Pilot, enrolled customers may remain on the rate until further notice with no less than 90-days notice if the rate is terminated.

8. Terms of Optional Service: This is an optional schedule subject to Electric Rule 12. If a customer terminates service under this rate schedule, the customer must wait at least 12 months before they can re-enroll in the Dynamic Export Rate Pilot.

9. Pricing Notification: SDG&E will provide Dynamic Export Rate Pilot hourly pricing on sdge.com as described above in Section 2(a) of this Schedule.

10. Dynamic Pricing Export Rate Pilot Electric Generating Facility: Eligible Generating Facilities utilized to receive service under the terms of this rate schedule shall comply with SDG&E's Electric Rule 21, Generating Facility Interconnection. Customers taking service on this schedule must execute a Rule 21 Interconnection Agreement with SDG&E.
