SCHEDULE EECC

ELECTRIC ENERGY COMMODITY COST

APPLICABILITY

Applicable to all customers who receive Utility Distribution Company (UDC) bundled service other than those customers taking service on EECC-TOU-DR-P, EECC-TOU-A-P, EECC-CPP-D, EECC-TOU-PA-P, EECC-CPP-D-AG, EECC-TBS and EECC-EV-TOU-5-P. Time of Use periods are as defined in the corresponding UDC rate schedules.

TERRITORY

Applicable throughout the territory served by the Utility.

RATES

This schedule has two purposes: (1) billing UDC Bundled Service customers for commodity energy, which consists of Utility supplied electricity sold by SDG&E to its customers and Department of Water Resources (DWR) supplied electricity sold by DWR to SDG&E customers with SDG&E acting as billing agent; and (2) developing DWR and Utility Supplied Energy Percentage. The rate tables show EECC fixed billing rates for all retail rate schedules. The commodity rates do not include the DWR Bond Charge applicable under Schedule DWR-BC or the Wildfire Fund Non-Bypassable Charge applicable under Schedule WF-NBC.

CPUC Decision (D.)17-01-006 and D.17-10-018 permit certain eligible behind-the-meter solar customers to continue billing under grandfathered time-of-use (TOU) period definitions for a specific period of time. Customer eligibility and applicable TOU periods, rates, and conditions for TOU Period Grandfathering are defined in Special Condition 5. All terms and conditions in this Schedule apply to TOU grandfathering customers unless otherwise specified.

SCHEDULE EECC

ELECTRIC ENERGY COMMODITY COST

Franchise Fees

A Franchise Fee Differential of 5.78% will be applied to the total bills calculated under this schedule, including DWR charges, for all customers residing within the corporate limits of the City of San Diego. Such Franchise Fee Differential shall be so indicated and added as a separate item to bills rendered to such customers.

Franchise Fees associated with DWR electricity sales will be reflected in a separate line item on customer bills titled "Franchise Fees for Electric Energy Supplied by Others".

Time Periods

All time periods listed are applicable to actual "clock" time

TOU Period	Weekdays		Weekends and Holidays	
	Summer	Winter	Summer	Winter
On-Peak	4 PM – 9 PM	4 PM – 9 PM	4 PM – 9 PM	4 PM – 9 PM
Off-Peak	All other hours	All other hours	All other hours	All other hours
Super Off-Peak	Midnight – 6AM; 10 AM – 2 PM	Midnight – 6AM; 10 AM – 2 PM	Midnight – 2 PM	Midnight – 2 PM

Seasonal Periods

The seasonal periods are defined as the following:

All Customer Classes:
Summer: June 1 – October 31
Winter: November 1 – May 31

Distribution Loss Factors (DLFs)

The DLF_{TLL} for each voltage level includes a factor for lost and unaccounted for energy. DLF_{TLL} will be calculated by the utility based on the forecast hourly SDG&E UDC Service Area Load (Direct Access, plus UDC customers, including the Hourly EECC Rate Option Service) per Decision 97-08-056, as modified by Decision 97-11-026. The hourly DLF_{TLL} will be broken out by service voltage level and made available each day to market participants during the day-ahead market. The utility will calculate the hourly DLF_{TLL} by applying the following formulae:

a. **Secondary Voltage Class Customers**

$DLF_{DLL} = 1 + [Losses/Load]$
$DLF_{TLL} = 1.0065 \times DLF_{DLL}$

Where: $Losses = [0.0000090935 \times (SysLoad)^2] + 27.21$
$Load = -[0.00000804463 \times (SysLoad)^2] + [0.8586372 \times SysLoad] - 24.0524567$
$SysLoad$ = SDG&E system load during hourly period in MW.

b. **Primary Voltage Class Customers**

$DLF_{DLL} = 1 + (Losses/Load)$
$DLF_{TLL} = 1.0065 \times DLF_{DLL}$

Where: $Losses = [0.0000001523524 \times (SysLoad)^2] + 0.427367656$
$Load = -[0.000001181634 \times (SysLoad)^2] + [0.12612 \times SysLoad] - 3.533$
$SysLoad$ = SDG&E system load during hourly period in MW.

c. **Primary at Substation Voltage Class Customers**

$DLF_{DLL} = 1 + (Losses/Load)$
$DLF_{TLL} = 1.0065 \times DLF_{DLL}$
Where: $Losses = [0.000000000009798 \times (SysLoad)^2] + 0.007089$
$Load = -[0.0000000196 \times (SysLoad)^2] + [0.002092 \times SysLoad] - .0586$
$SysLoad$ = SDG&E system load during hourly period in MW.

d. **Transmission Voltage Class Customers**

$DLF_{DLL} = 1 + (Losses/Load) = 1$
$DLF_{TLL} = 1.0065 \times DLF_{DLL} = 1.0065$

SCHEDULE EECC

ELECTRIC ENERGY COMMODITY COST

DEVELOPMENT OF DWR AND UTILITY SUPPLIED ENERGY PERCENTAGES L

1. Development of DWR Supplied Energy Percentages

   Hourly DWR supplied energy percentages are determined by dividing DWR purchases for that hour by the total MWH scheduled in all forward markets and an estimate for real time purchases for that hour. The rate group average DWR supplied energy percentages for the billing period is determined by calculating an average of hourly DWR supplied energy percentage weighted by the utility's class hourly statistical or dynamic load profile for the applicable rate group identified in Section 4 below. The rate by consumption type categories identified in Section 4 below will be used to determine the average DWR supplied energy percentages. The average DWR supplied energy percentages are calculated on a weekly basis using all calendar weeks from the time of the customer's previous billing through the calendar week prior to the current billing. For purposes of this calculation, calendar week shall be defined as the seven day period beginning on Wednesday and ending on the following Tuesday. The average DWR supplied energy percentages are calculated each Sunday and are utilized for all billing executed through the following Saturday.

2. Development of Utility Supplied Energy Percentages

   The Utility supplied energy percentage for a billing period is calculated by subtracting the DWR supplied energy percentage from 100%.

3. Summary of Class Load Profile Categories and Associated Rate Schedules

Class Load Profile	Rate Category	Associated Rate Schedules	
Residential:	Residential Non-Time-of-Use	DR, DM, DS, DT, DT-RV	
	Residential Time-of-Use	TOU-DR, DR-SES, TOU-DR1, TOU-DR2, TOU-ELEC	T
	Electric Vehicle Time-of-Use	EV-TOU	
	Electric Vehicle & Household TOU	EV-TOU-2, EV-TOU-5	
Small Commercial:	Small Commercial Non-Time-Of-Use / Small Commercial Time-Of-Use	TOU-A, TOU-A2, TOU-A3, A-TC, UM	T
Medium Commercial:	Medium Commercial/Industrial	AL-TOU-M, DG-R-M, TOU-M, OL-TOU, EV-HP, S	T
Large Commercial:	Large Commercial/Industrial	AL-TOU-L, AL-TOU2, DG-R-L, A6-TOU, VGI, PUBLIC GIR, S	T
Agricultural:	Agricultural Non-Time-of-Use	PA-T-1	
	Agricultural Time-of-Use	TOU-PA, TOU-PA2, TOU-PA3	
Lighting:	Lighting	LS-1, LS-2, LS-3, LS-2DS, LS-2AD, OL-1, OL-2, DWL	L

DEVELOPMENT OF DWR AND UTILITY SUPPLIED ENERGY PERCENTAGES (Continued)

4. Summary of Average Supplied Energy Percentages Categories

Category	Consumption Type		Number of Percentages
Residential	Total	at 1 Voltage	1
Residential TOU	On-peak, off-peak, super off-peak	at 1 Voltage	3
Electric Vehicle TOU	On-peak, off-peak, super off-peak	at 1 Voltage	3
Electric Vehicle & Household TOU	On-peak, off-peak, super off-peak	at 1 Voltage	3
Small Commercial	Total	at 2 Voltage	2
Small Commercial TOU	On-peak, off-peak, super off-peak	at 2 Voltage	6
Medium Commercial < 200 kW	On-peak, off-peak, super off-peak	at 4 Voltage	12
Medium Commercial < 200 kW AV Rate	Off-peak (include signal periods), Super off-peak	at 4 Voltage	8
Large Commercial/Industrial >= 200 kW	On-peak, off-peak, super off-peak	at 4 Voltage	12
Large Commercial/Industrial >= 200 kW AV Rate	Off-peak (include signal periods), Super off-peak	at 4 Voltage	8
Schedule A6-TOU	On-peak, off-peak, super off-peak	at 3 Voltage	9
Agricultural	Total	at 1 Voltage	1
Agricultural TOU	On-peak, off-peak, super off-peak	at 3 Voltage	9
Lighting	Total	at 1 Voltage	1
		Total	80

Eighty percentages will be determined for each of the 9 billing period options (4-week period up to a 12-week period).

SCHEDULE EECC

ELECTRIC ENERGY COMMODITY COST

SPECIAL CONDITIONS

1. Definitions. The definitions of principle terms used in this schedule are found either herein or in Rule 1, Definitions.

2. Service Restrictions. Service under this schedule is restricted to the entire load served by single meters. The electric load of a single meter may not be partitioned among services rendered under this schedule and services rendered by a non-utility party under Direct Access or Community Choice Aggregation (CCA).

3. Terms of Service: A customer receiving optional service under this Schedule may elect to change to another applicable rate schedule, but only after receiving service on this Schedule for at least 12 consecutive months, except as specified in SC 4. If a customer elects to discontinue service on this Schedule, the customer will not be permitted to return to this Schedule for a period of one year, unless returning to service from a Direct Access Provider or a Community Choice Aggregator (CCA) in less than one year.

4. Early Termination: An eligible customer may elect to take commodity from a Direct Access provider or from a CCA during its Term of Service granted it has complied with all other applicable tariff requirements, including, but not limited to the terms and conditions set forth in Rules 25.1 and 27, respectively.

5. TOU Period Grandfathering: Pursuant to D.17-01-006 and D.17-10-018 TOU Period Grandfathering permits certain eligible behind-the-meter solar customers to continue billing under grandfathered TOU period definitions after new TOU Periods are implemented, for a specific period of time.

   TOU Period Grandfathering Eligible Customer Generator (Non-Residential): a non-residential customer with an on-site solar system, who has filed an initial interconnection application by January 31, 2017. The on-site solar system must be designed to offset at least 15% of the customer's current annual load. For Public Agency customers, defined here as public schools, colleges and universities; federal, state, county and city government agencies; municipal utilities; public water and/or sanitation agencies; and joint powers authorities, the non-residential account must have filed an initial interconnection application by December 31, 2017.

   TOU Period Grandfathering Term (Non-Residential): Upon SDG&E's implementation of updated TOU periods adopted in D.17-08-030, TOU Grandfathering Eligible Customer Generators will continue to be billed under prior existing TOU periods and resulting rates for the remainder of their applicable TOU Grandfathering Term, which begins upon issuance of a permission to operate customer's on-site solar system and continues for 10 years. In no event shall the duration a customer's grandfathering term extend beyond July 31, 2027 (December 31, 2027 for schools). Upon expiration of a customer's TOU Period Grandfathering Term, the customer will be billed using his otherwise applicable TOU periods and associated rates beginning with the customer's next billing cycle.

6. PCIA Recovery in Bundled EECC Rates: Bundled Service customers EECC rates include an amount to recovery the above-market portion of SDG&E's generation portfolio. This above-market portion is referred to as the Power Charge Indifference Adjustment (PCIA) amount and is shown on Bundled Service customers' bills under the Breakout of Current Charges panel and embedded in Electric Generation charges.
