SCHEDULE NEM-V-ST

VIRTUAL NET ENERGY METERING FOR MULTI-TENANT AND MULTI-METER PROPERTIES
SUCCESSOR TARIFF

APPLICABILITY

Optionally available to Qualified Customers, as defined in Special Condition (SC) 3, owning, renting, or leasing space within a multi-tenant or multi-meter[1] property, which includes all residential (whether rental properties or condominiums), commercial and industrial properties, where the Owner of the property has installed a Renewable Electrical Generation Facility ("REGF"), as defined in SC 1.a), that is intended primarily to offset part or all of the eligible property's electrical requirements[2] (hereinafter "eligible customer-generator") and contracts with the Utility to have all eligible output from the REGF supplied to the Utility for the purpose of providing a credit to the Qualified Customers. The terms of this rate schedule shall apply to any Qualified Customer that is designated by the Owner on a Generation Credit Allocation Request Form – 142-02770 ("Credit Allocation Form"), unless the customer provides written notification to the Utility declining to receive a credit. Virtual Net Energy Metering (VNM) facilitates cost savings for Owners by avoiding the installation of an eligible customer-generator on each individual tenant's unit, and also provides Qualified Customers with benefits that would otherwise be provided under Schedule NEM-ST.

This schedule shall become available to eligible customer-generators upon request.

Accounts not fully utilizing energy allocated to them under this schedule may be eligible for additional compensation at the conclusion of their Relevant Period as described in Special Condition 8.e. P

All Qualified Customers are permitted to participate in demand response or emergency reliability programs for which the customer is otherwise eligible. N N

---

1 Multi-meter" means two or more utility revenue meters receiving service under this schedule, in addition to the Net Generation Output Meter.

2 Electrical requirements means the recorded kWh usage associated with all identified Qualified Customer accounts over the most recent 12-month period preceding the submission of an interconnection agreement.

(Continued)

SCHEDULE NEM-V-ST

VIRTUAL NET ENERGY METERING FOR MULTI-TENANT AND MULTI-METER PROPERTIES
SUCCESSOR TARIFF

APPLICABILITY (continued)

For purposes of calculating customer charges, standby charges, and demand charges, a Qualified Customer shall be treated as though it was an eligible customer-generator served under Schedule NEM-ST. The Utility may charge incremental billing costs to Qualified Customers requesting to receive a demand credit subject to a review for reasonableness. The customer must agree to such incremental charges prior to utility providing this service.

In the event a Qualified Customer becomes eligible for payments resulting from participation in a demand response program, such payments to a Qualified Customer shall be based on the customer's metered usage disregarding any contributions from REGF. Similarly, any other demand response programmatic elements that are affected by a customer's load (e.g. program eligibility) shall also exclude from consideration any impacts of REGF generation.

Service on this rate schedule must be taken in combination with the Qualified Customer's otherwise applicable rate schedule (OAS).

Pursuant to Decision (D.) 23-11-068, this Schedule is closed to new customers with applications submitted after February 14, 2024. Notwithstanding the foregoing, customers applying on or after February 15, 2024, but before the Virtual Net Billing Tariff (NBT-V) adopted by D.23-11-068 is approved may apply for interconnection under this Schedule subject to the terms of SC 6. Customers applying before February 15, 2024, are subject to the application requirements in SC 6 to maintain eligibility on NEM-V-ST. N

Customers submitting their application after the NEM-V-ST Sunset Date (February 14, 2024) pursuant to D.23-11-068, Customers with an interconnection application date after the NEM-V-ST Sunset Date will take service and be billed on this NEM-V-ST Schedule on an interim basis, and transition to the Virtual Net Billing Tariff (NBT-V) once it is operational. These customers will interconnect using NEM-V-ST interconnection forms, or once available, NBT-V interconnection forms. The Customers NBT-V 9-year Legacy Period begins to run as of the customers interconnection date; there will be no legacy period on this NEM-V-ST Schedule. Such Customers will transition to NBT-V at the beginning of their next available billing cycle in which the NBT-V billing is operational. At this time, the Customer is required to take service on an OAS in accordance with the requirements of NBT-V. Until the NBT-V tariff is approved this SC will govern the rules for Customers who submit interconnection applications, either using NEM-V-ST or NBT-V interconnection forms, after the NEM-V-ST Sunset Date. N

(Continued)

SCHEDULE NEM-V-ST

VIRTUAL NET ENERGY METERING FOR MULTI-TENANT AND MULTI-METER PROPERTIES
SUCCESSOR TARIFF

TERRITORY

Within the entire territory served by the Utility.

RATES

The Qualified Customer Bill, as determined under SC 8c., is applicable, less Customer's Allocated Credit, plus nonbypassable charges, as defined below. T

A one-time service origination set-up fee of $25 per Qualified Customer Account with a cap of $500 per NEM-V-ST arrangement is applicable to eligible customer-generators receiving service under this schedule. The fee will be charged to an Owner designated account that is included in the NEM-V-ST arrangement. The Owner will identify the designated account on the Credit Allocation Form.

Residential Qualified Customers may choose to be served under an applicable optional Time-of-Use ("TOU") rate. Qualified Customers who complete their interconnection application for service under this schedule within a period of 120 days after SDG&E's 2016 General Rate Case Phase 2 ("GRC P2") proceeding (A.15-04-012) TOU rates become effective shall be permitted to 1) take service under the new TOU rates or 2) take service under existing TOU rates or tiered rates in effect at the time their interconnection application was completed for a period of time up to 5 years from the date they take service.

Residential Qualified Customers who complete their interconnection applications for service under this schedule 120 days after the effective date of the implementation of SDG&E's 2016 GRC P2 are required to take service under an applicable TOU rate and shall not have the ability to opt-out to a non-TOU rate. At the time of completing their interconnection application, residential qualified customers shall be permitted to elect any applicable residential TOU rate option. In the absence of an election, eligible customer-generators and/or qualified customers will take service under SDG&E's Domestic TOU rate for households with solar energy systems, Schedule DR-SES. Any Qualified Customer who was defaulted to Schedule DR-SES as a result of not making an initial election will have the option to elect a new residential TOU rate at a future point, to be effective in the Qualified Customer's subsequent billing period. Any Qualified Customer who optionally elects an applicable residential TOU rate option will have the option to elect a different residential TOU rate at a future point, provided under Rule 12, SC D.

Residential Qualified customers who do not have the option to take service on a TOU rate are allowed to interconnect under the NEM-V-ST tariff on their existing rate schedule, or another rate schedule available to them. This exemption to the TOU requirement is applicable only to the limited number of customers who do not have a TOU rate available to them. This includes customers taking service under Schedules DM, DS, DT and DT-RV

In addition, residential Qualified Customers completing an interconnection application pursuant to this schedule prior to the date that default residential TOU rates go into effect may exercise the option to maintain their TOU rate at the time of completing their interconnection application under this schedule for up to five years from the date they began taking service under such rate.

(Continued)

*

SCHEDULE NEM-V-ST

VIRTUAL NET ENERGY METERING FOR MULTI-TENANT AND MULTI-METER PROPERTIES
SUCCESSOR TARIFF

RATES (continued)

All Qualified Customers taking service under this schedule are responsible for paying nonbypassable charges which pursuant to D. 16-01-044 are defined as Public Purpose Program (PPP) charges, Nuclear Decommissioning (ND) charges, the Competition Transition Charge (CTC), the Department of Water Resources Bond Charge (DWR-BC) and the Wildfire Fund NonBypassable Charge (WF-NBC). These charges are calculated based on the total energy delivered by the Utility, during each metered interval recorded over the course of each monthly billing period.

In order to accurately calculate nonbypassable charges for customers participating in SDG&E's Residential Electric Smart Meter Opt-Out program and requesting service under this Schedule, an interval data recoding (IDR) meter with no radio communications ability will be used in place of the wireless meter to provide electric service for residential customers who elect this option.

SDG&E rates and rate design, including the rates and rate design reflected in this Tariff, are subject to change from time to time. Customers should take this into consideration when making any long term decisions based on rate structures that are currently in place.

SPECIAL CONDITIONS

1. Definitions: The Definitions of terms used in this schedule are found either herein or in Rule 1.

   a) Renewable Electrical Generation Facility: A facility that generates electricity from a renewable source listed in paragraph (1) of subdivision (a) of Section 25741 of the Public Resources Code or Section 2827(b)(11). These sources are biomass, solar thermal, photovoltaic, wind, geothermal, fuel cells using renewable fuels, small hydroelectric generation (only if facility will not cause an adverse impact on instream beneficial uses or cause a change in the volume or timing of streamflow), digester gas, municipal solid waste conversion, landfill gas, ocean wave, ocean thermal, or tidal current, and any additions or enhancements to the facility using that technology.

   b) Property: All of the real property and apparatus employed in a single multi-tenant or multi-meter facility on contiguous parcels of land. These parcels may be divided by a dedicated street, highway or public thoroughfare or railway, so long as they are otherwise contiguous, part of the same single multi-tenant or multi-meter facility, and all under the same ownership.

   c) Generating Account: The account to which an Eligible Generator is interconnected with SDG&E through a single meter for which the Owner or Operator is an SDG&E customer. Pursuant to D.22-12-056 OP 9, multiple REGFs on an eligible property are allowed to be treated as one generator, with credits allocated across Benefitting Accounts on the Property. P T T T

   d) Benefitting Account: Each Qualified Customer Service Account that the Owner has designated on the Allocation Request Form, as discussed in Special Condition 7, to receive an Allocated Credit.

   e) Arrangement. One or more Generating Accounts and all designated Benefitting Accounts that will receive Allocated Credits from the Generating Account. A Qualified Customer may have more than one Arrangement, but Generating Accounts and Benefitting Accounts can only be designated to a single Arrangement. There must be more than one Benefitting Account per Arrangement. T T P

(Continued)

SCHEDULE NEM-V-ST

VIRTUAL NET ENERGY METERING FOR MULTI-TENANT AND MULTI-METER PROPERTIES
SUCCESSOR TARIFF

SPECIAL CONDITIONS (continued)

2. Treatment of Generation: REGFs that are installed and utilized in providing service under terms of this rate schedule shall be treated as though they were installed and utilized under terms of Schedule NEM-ST, unless otherwise specified herein.

3. Qualified Customer: A Qualified Customer is either: (i) the Owner or Operator of the multi-tenant, multi-meter Property with one or more separately metered accounts: (ii) an entity authorized by the Owner to install and/or operate the generating facility and who will be the Utility's customer of record for the Generating Facility; or (iii) a tenant/occupant of the Property with a separately metered account.

   The Qualified Customer definition shall extend to Owner for the purpose of billing common use areas, unoccupied units, and other metered accounts under which the owner receives service.

4. Owner: The Enterprise, or Entity, that owns a multi-tenant or multi-meter property.

5. Operator: An Operator is a Qualified Customer who operates a business by leasing or renting the Property from an Owner and who has an Eligible Generator located on the Property.

6. Generator Interconnection Responsibility:

   To be eligible for NEM-V-ST service, a customer's interconnection application must be submitted on or before February 14, 2024 (Sunset Date), and must comply with the following: N

   a) The interconnection application date for residential customers is defined as the submission date of an application that is free of major deficiencies and includes a complete application (not including the final building permit), a signed contract (if applicable), a single-line diagram (if applicable), a complete California Contractors State License Board Solar Energy System Disclosure Document (if applicable), a signed California Solar Consumer Protection Guide (if applicable) and a Customer Authorization (if applicable).

   b) The interconnection application date for non-residential customers is defined as the submission date of an application that is free of major deficiencies and includes a complete application (not including the final building permit), a signed contract (if applicable), a single-line diagram and a Customer Authorization (if applicable).

   c) All customers seeking to interconnect on this NEM-ST schedule shall submit final building permit sign off and electrical clearing by the authority having jurisdiction by no later than February14, 2027.

   SDG&E is granted the discretion to give NEM-V-ST tariff eligibility to a customer if a delay in meeting the NEM-V-ST Sunset Date is caused by the utility. Similarly, SDG&E has the discretion to apply NEM-V-ST eligibility to customers who fail to submit the final building permit sign off and other necessary documentation by February 14, 2027, if such failure is due to utility-caused delays. N

(Continued)

SCHEDULE NEM-V-ST

VIRTUAL NET ENERGY METERING FOR MULTI-TENANT AND MULTI-METER PROPERTIES
SUCCESSOR TARIFF

SPECIAL CONDITIONS (continued) L

6. Generator Interconnection Responsibility (continued)

To be eligible for NEM-V service, the Owner shall have an effective interconnection agreement with the Utility and shall have submitted a completed Credit Allocation Form to the Utility. In addition, the Owner shall have paid all costs associated with the Utility installing a Generator Output Meter capable of recording in 15-minute intervals, applicable disconnect/reconnect procedure charges requested by the customer, any wiring, trenching, conduit, or other facility costs incurred by the Utility to interconnect with the Owner's REGF adjusted based on Rule 2 factors for a one-time payment. The location of the customer's Generator Output Metering equipment shall be approved by the Utility and will normally be grouped with the service and metering equipment for one, or more, of the tenant or house meters. Eligible customer-generators whose system capacity[1] is equal to or less than one MW shall be responsible for paying an interconnection fee of $132.00. Eligible customer-generators whose system capacity exceeds one MW shall be responsible for paying an interconnection fee of $800.00. Additionally, all customers installing a solar electricity generating facility with a capacity in excess of 1 MW shall be subject to Network and/or Distribution upgrade costs in accordance with Rule 21.

All Customers with Generating Facilities sized larger than 1 MW seeking interconnection with SDG&E's Transmission System shall apply to the CAISO for interconnection and be subject to the CAISO Tariff,and must submit an executed CAISO interconnection agreement prior to receiving service under this Schedule. Such Customers shall also submit an online Interconnection Application for Customer with Solar and/or Wind Electric Generating Facilities Greater than 30 Kilowatts and for Customers Installing Energy Storage Paired with Such Generating Facilities (Form 142-02773) to SDG&E for the purpose of determining eligibility under this Schedule,but shall not be required to submit any fee in connection with Form 142-02773. Additionally, Customers with Generating Facilities sized larger than 1 MW seeking interconnection with SDG&E's Transmission System shall be subject to applicable interconnection cost responsibility provisions set forth in the CAISO Tariff. These requirements are not applicable to Eligible Generators with Permission to Operate (PTO) letters received as of May 6, 2022 or proposed Eligible Generators with materially complete interconnection applications submitted as of May 6, 2022.

1. System capacity is the electricity generating capacity based upon CEC-AC rating standards. L

(Continued)

SCHEDULE NEM-V-ST

VIRTUAL NET ENERGY METERING FOR MULTI-TENANT AND MULTI-METER PROPERTIES
SUCCESSOR TARIFF

SPECIAL CONDITIONS (Continued) L

6. Generator Interconnection Responsibility (Continued)

If there is any load behind the Generation Output Meter in addition to incidental load related to the operation of the eligible customer-generator, SDG&E reserves the right to require, at the Owner's expense, the purchase and installation of metering equipment necessary to determine the total generation and total usage at the interconnection point. Such usage shall be billed as a usage account to ensure that all eligible generation output is allocated and that netting only occurs after credits have been allocated.

Once CSI Program Administrators have adjusted the CSI Program Handbook to allow for combined metering methods, customers using PBI meters for CSI incentives will not be required to install an additional generation output meter for purposes of receiving service under this schedule. However, the PBI meter will need to be (1) a utility owned meter; (2) a utility read meter where SDG&E will read the PBI meter data for purposes of providing CSI incentive payments; and (3) installed in a location approved by SDG&E.

If the project requires a net generation output meter (NGOM), the current cost of a NGOM varies depending on the type of meter required and typically range from $1000 - $5000 and updated as required. The NGOM costs do not include any additional communication costs that may be required.

Sample costs by meter:

Meter Type	Estimated Cost
Self-contained Meter Installation (≤ 200a)	$954
Single-phase CT Installation	$3,192
Three-phase CT Installation (<800a)	$3,235
Three-phase CT Installation (≥800a)	$3,213

T
T
T
T

Costs for customer requested disconnect/reconnect service vary depending on several factors including the level of service (secondary or primary), overhead or underground connection, time of day service is requested, labor, etc. The costs billed to the customer for requested disconnect/reconnect service can range as high as $5,500 or higher and will be based on the actual costs incurred for the specific situation at the time the service is provided. SDG&E reserves the right to waive such costs on a limited basis for small services (200 amps or below, no more than one per premises) where the work can be performed at a time and in a manner that would minimize any negative effects on normal utility operations. SDG&E will inform the owner about what reasonable disconnect/reconnect procedure charges they may be expected at the time of the interconnection in accordance with internal Project Management Policies and Procedures for prearranged customer-requested outages. L

(Continued)

SCHEDULE NEM-V-ST

VIRTUAL NET ENERGY METERING FOR MULTI-TENANT AND MULTI-METER PROPERTIES
SUCCESSOR TARIFF

SPECIAL CONDITIONS (Continued)

7. Generation Credit Allocation Request Form (Form 142-02770): A form completed by the Owner that designates how the Energy Exported, as defined in SC 8a., will be allocated among Qualified Customers. Except as permitted under Special Condition 11, The NGOM should record the generation intended for the benefit of all the Benefitting Accounts, which will be allocated in accordance with Special Condition 8 (Billing Process). The Credit Allocation Form provides the Owner the option to designate the disposition of unallocated credits to either: a Common Area Account, or one Qualified Customer Account. The initial Owner-designated percentage split shall become effective on the regularly scheduled monthly meter read date closest to the date on which the form is received by the Utility. The Owner may submit an updated form to revise these allocations at any time thereafter. There shall be no charge for up to one adjustment per Qualified Customer account per a 12-month period. Subsequent changes per 12-month period will occur at a cost of $7.50 per Qualified Customer account modified. These charges will be billed to an Owner designated account under which the owner receives service that is included in the NEM-V-ST arrangement. The Owner will identify the designated account on the Credit Allocation Form. Modified Credit Allocation Forms shall become effective on the first regularly scheduled monthly meter read date that is at least 15 days following receipt by the Utility.

   No Cost Generator Account Report - Upon request from the Owner, SDG&E will make available, via e-mail, a Generator Account report that will include a) Generator Account: Measured Generation (kWh) output for the billing month and b) For each Qualified Customer Account, the Service Address, Allocation Percentage, Allocated kWh and Billing cycle start and end dates. To avoid multiple fees for allocation updates to the Common Area Account or the designated Qualified Customer accounts, the Owner shall not be precluded from executing a Continuity of Service Agreement (Form 124-463) so that the generation allocated to a Qualified Customer account will be applied to the Owner's account, in the event Qualified Customer account customer terminates its service.

   Vacant Units: Residential or nonresidential vacant units may have a zero percent allocation form the renewable electrical generation facility (Generation Facility) when the vacation unit is between tenancies and at the request of the generating account customer or the Generation Facility owner. If a "Designated Account" has been assigned, then the allocated percentage benefit will be transferred to that "Designated Account" based on the process outlined in this tariff.

   When the customer of record for a Benefitting account in a NEM-V-ST Arrangement changes, the new customer of record will take service under this schedule in accordance with the allocated percentage provided previously for the Benefitting Account in the NEM-V-ST Arrangement with no action being required for the new customer. N N N

8. Billing Process: The following billing process shall be used.

   a) Energy Exported: The metered output, delivered to the grid, as recorded by the Generator Output Meter and validated by the appropriate Utility billing processes during the specific billing period.
   b) Allocation of Credit: Monthly allocated Credits for Qualified Customers are determined by multiplying the monthly Energy Exported (kWh) by the percentages contained in the Generation Credit Allocation Request Form on file with the Utility, and then converting each kWh credit to dollars using the Qualified Customer's OAS.
   c) Qualified Customer Bill: The OAS for each Qualified Customer, adjusted to conform to the conditions set forth in Schedule NEM. Qualified Customers served under this schedule are responsible for all charges from their OAS including monthly billed minimum charges, customer charges, meter charges, facilities charges, energy and demand charges, excluding any adjustments due to power factor provisions. Applicable demand charges are defined in the OAS. Any nonbypassable charges shall be billed based on the total energy delivered by the Utility.

(Continued)

SCHEDULE NEM-V-ST

VIRTUAL NET ENERGY METERING FOR MULTI-TENANT AND MULTI-METER PROPERTIES
SUCCESSOR TARIFF

SPECIAL CONDITIONS (Continued) L

8. Billing Process: The following billing process shall be used (continued)

d) Virtual Net Energy Metering and Billing: VNM means measuring the difference between the electric energy supplied by the Utility to Qualified Customers and the electric energy generated by an eligible customer-generator, fed to the electric grid, and credited to Qualified Customers over a 12-month period (Relevant Period).

At the end of each Relevant Period following the Qualified Customer's date of SDG&E's written authorization for the REGF's parallel Operation with SDG&E's electrical system, the Qualified Customer shall be billed for net electric energy used during that period and the non-bypassable charges for the total energy delivered by the utility. If a Qualified Customer terminates service under this rate schedule prior to the end of any Relevant Period, the Utility shall reconcile the customer's consumption of electric energy with any remaining credit, and bill and provide compensation (as described below) to the customer as if it were the end of the normal Relevant Period.

(1) For an OAS with Baseline Rates:

If the Qualified Customer is a net consumer for the month, the net kWh consumed shall be billed in accordance with the Qualified Customer's OAS. If the Qualified Customer is a net generator, the net kWh generated shall be valued at the applicable baseline rates up to the billing period's baseline allowance, with any excess kWh generated valued at the applicable non-baseline rates. Any nonbypassable charges shall be billed based on the total energy delivered by the Utility.

(2) For an OAS with Time-of-Use Rates

If the Qualified Customer is a net consumer during any discrete TOU period, the net kWh consumed shall be billed at the applicable TOU rates charged in the OAS. If the Qualified Customer is a net generator, the net kWh generated shall be valued at the applicable TOU rates charged in the OAS. Any nonbypassable charges shall be billed based on the total energy delivered by the Utility.

e) Net Surplus Compensation: A NEM-ST customer with "net surplus electricity" (all electricity generated by an eligible customer measured in kilowatt-hours over a 12-month period that exceeds the amount of electricity consumed by that eligible customer), is eligible to receive net surplus compensation ("NSC"), valued in accordance with the methodology adopted in D.11-06-016. If a customer does not have allocated kWhs in excess of their usage, the customer is not eligible for NSC. L

(Continued)

SCHEDULE NEM-V-ST

VIRTUAL NET ENERGY METERING FOR MULTI-TENANT AND MULTI-METER PROPERTIES
SUCCESSOR TARIFF

SPECIAL CONDITIONS (Continued) L

8. Billing Process: The following billing process shall be used (continued)

f) Compensation for net surplus energy: SDG&E will compensate eligible Qualified Customers, with excess kWhs at the end of their relevant period, for both the value of the electricity and the value of the renewable attributes. The utility will provide compensation for net surplus generation using the following formula:

NSC = Value of Electricity + Value of Renewable Energy Credits (if applicable)

(i) Value of the Electricity -

Value of Electricity = Net surplus kWhs x DLAP price

The utility will use SDG&E's Default Load Aggregation Point (DLAP) price as the basis for the net surplus compensation rate (adopted in D.11-06-016). DLAP reflects the costs the utility avoids in procuring power during the time period net surplus generators produce excess power.

This rate is the simple rolling average of SDG&E's DLAP price from 7 a.m. to 5 p.m. corresponding to the customer's 12-month relevant period. The rolling average will be calculated on a monthly basis and be applied to all customers with a relevant period in the following month.

The utility uses a full 12 months of DLAP prices, as published on the California Independent System Operator (CAISO) Open Access Same-time Information System (OASIS), ending the twentieth (20th) day of each month. The utility then calculates the net surplus compensation rate within five days of the first of the month to allow the CAISO to finalize the day-ahead DLAP prices. This rate is applied to all eligible net surplus generators, irrespective of their rate class. This rate will be updated monthly and is available at www.sdge.com/nem.

(ii) Value of Renewable Energy Credits –

Value of Renewable Energy Credits = Net surplus kWhs x Average Renewable Premium

The California Energy Commission (CEC) has determined the eligibility of net energy metering customer facilities for the Renewables Portfolio Standard (RPS) and developed an ownership verification and tracking process for Renewable Energy Credits (RECs) created by net surplus generators, which is set forth in the CEC's RPS Eligibility Guidebook, available at: http://www.energy.ca.gov/renewables/documents/#rps L

(Continued)

SCHEDULE NEM-V-ST

VIRTUAL NET ENERGY METERING FOR MULTI-TENANT AND MULTI-METER PROPERTIES
SUCCESSOR TARIFF

SPECIAL CONDITIONS (Continued)

8. Billing Process: The following billing process shall be used (continued) L

f) Compensation for net surplus energy: SDG&E will compensate eligible Qualified Customers, with excess kWhs at the end of their relevant period, for both the value of the electricity and the value of the renewable attributes. The utility will provide compensation for net surplus generation using the following formula: (continued)

(ii) Value of Renewable Energy Credits (Continued)

The Utility will include an Renewable Attribute Adder (RAA) with the NSC rate if the eligible customer has: (1) certified ownership of RECs associated with his net surplus generation and provides this certification to the Utility; (2) obtained RPS certification from the CEC for his renewable electrical generation facility and provides this certification to the Utility; and (3) transfers the ownership of the RECs associated with his net surplus electricity to the Utility using the Western Renewable Energy Generation Information System (WREGIS). To effectuate these requirements, Customers requesting Utility compensation for the RAA must complete the Net Energy Metering Renewable Energy Credits Compensation Agreement (Form 182-1000).

The renewable attribute adder will be calculated using the most recent Western Electricity Coordinating Council (WECC) average renewable premium, based on United States Department of Energy (DOE) published data. The renewable attribute adder will only be paid to those net surplus generators who provide RECs to the Utility. This rate will be updated annually and is available at: http://www.sdge.com/nem.

In accordance with the process established in D.11-06-016, NEM-ST customers who elect to receive NSC must notify the Utility that they are a Qualifying Facility exempt from certification filing at the Federal Energy Regulatory Commission ("FERC"). Since all eligible customer-generators with net power production capacities of 1 MW or less, currently meet the requirements for a qualifying facility exempt from certification filing at FERC by being under 1 MW (under FERC Order 732), SDG&E requires no additional documentation at this time. NEM-ST customers interconnecting a REGF with a capacity greater than 1 MW that are also electing to receive Net Surplus Compensation shall provide notice to the Utility that it is self-certifying such facility as a Qualifying Facility pursuant to the Public Utility Regulatory Policies Act of 1978 by properly completing and filing FERC Form No. 556 with the FERC. FERC Form No. 556 is not a requirement of interconnection.

Eligible customers have the option to carry over net surplus compensation to future 12-month periods as a bill credit or can elect a monetary payment, if the amount is greater than one dollar ($1). Payments for NSC shall be reduced by any amount the customer owes to the Utility. L

(Continued)

SCHEDULE NEM-V-ST

VIRTUAL NET ENERGY METERING FOR MULTI-TENANT AND MULTI-METER PROPERTIES
SUCCESSOR TARIFF

SPECIAL CONDITIONS (Continued) L

9. Monthly Billing: The Utility shall provide Qualified Customers with eligible customer-generator production and individual consumption information with each regular monthly bill. The information shall include the current monetary balance owed to the Utility for the net energy consumed in the current Relevant Period. Qualified Customers shall pay any balance due for net energy consumed monthly. Any remaining credit over a monthly billing cycle shall be carried over to the following monthly billing period, until the end of the Relevant Period.

   Qualified Customers shall not be eligible for the Level Pay Plan option set forth in Rule 9.

   For customers eligible under Schedule GHG-ARR, volumetrically-based California (CA) Climate Credits will net when customers generate. Checks issued to NEM customers electing an off-bill payment for Net Surplus Compensation will incorporate any remaining CA Climate Credits.

   Nonbypassable charges will be calculated by multiplying the rate for each charge by the full amount of electricity the Qualified Customer receives from the Utility over the course of each monthly billing period.

10. Generator Limitation: Except as permitted under Special Condition 11, no generator shall be included behind the above-described Generator Output Meter other than the eligible customer-generator receiving service under this schedule. Schedule NEM-V-ST is not applicable to electricity generation technologies that would not otherwise be eligible to receive service under Schedule NEM-ST. L

(Continued)

SCHEDULE NEM-V-ST

VIRTUAL NET ENERGY METERING FOR MULTI-TENANT AND MULTI-METER PROPERTIES
SUCCESSOR TARIFF

SPECIAL CONDITIONS (Continued)

11. Behind the Meter Isolated Operation: The Eligible Generator can be operated in isolation to provide backup/standby services to one or more Benefitting Accounts during a grid outage or testing periods. All loads served during isolation mode should have the same Point of Common Coupling as the Generating Account. During isolated operation, participating accounts must be configured such that no load or generation is registered on the Generating or Benefitting Account meters. Prior to installing a new Eligible Generator or reconfiguring an existing Eligible Generator to provide backup services, the Owner or Operator must receive written approval from SDG&E confirming that the reconfiguration of the Eligible Generator complies with SDG&E's electrical and interconnection requirements for the requested reconfiguration.

    Planned ore Emergency Outages: During planned or emergency outages, operation in isolation of REGF and storage is permitted to serve onsite loads as described in this SC. N N

12. Any customer with an existing REGF with a capacity in excess of 30kW and meter who enters into a new net energy metering contract shall submit a completed form 142-02763 – NEM/VNM/NEM-V Inspection Report ("Inspection Report") to SDG&E, unless the electrical generating facility and meter have been installed or inspected within the previous three years. The Inspection Report shall be prepared by a California licensed contractor who is not the owner or operator of the facility and meter. A California licensed electrician shall perform the inspection of the electrical portion of the facility and meter and sign the Inspection Report. If an inspection is required, the customer shall submit the fully completed Inspection Report to SDG&E within 90 days of the of the customer becoming the customer of record at this account, or else the customer agrees to disconnect their Generating Facility and inform SDG&E it no longer will take service under a net energy metering rate schedule. By signing the Interconnection Agreement, the Inspection Report shall be incorporated into the Interconnection Agreement.

13, Temporary Applicability Limitation for Schedule NEM-V: All Qualified Customers in a single VNM arrangement who elect to take service in combination with a TOU rate must take service on the same TOU rate structure (i.e., a three-period structure with an on peak period of 4:00p.m. to 9:00p.m. or, if the solar system is eligible for TOU grandfathering, 11:00 a.m. to 6:00 p.m.). If the VNM arrangement includes a meter served under an agricultural rate then all Qualified Customers in the arrangement must be served under three-period TOU rate structure with an 11:00a.m. to 6:00p.m. on-peak period. These limitations will apply until such time that SDG&E has developed the system capability to accommodate multiple TOU rate structures in a single Aggregated Arrangement

SPECIAL CONDITIONS (Continued) L

14. Per Ordering Paragraph 8 in Resolution E-4481, SDG&E will file an Advice Letter with its proposed solution on identifying data that can be provided to the Generating Account Owners to verify that Qualified Customer Account holders are properly credited.

15. NEM-V-ST Legacy Period T

This Special Condition is applicable to all Qualified Customers receiving service on this Schedule or who have submitted all documentation necessary to receive service on this Schedule.

Pursuant to D.16-01-044, Customers receiving service on this schedule NEM-V-ST, or new customers who have submitted applications that are free of major deficiencies and include all necessary documents to receive service on NEM-V-ST before April 15,2023, are eligible to continue receiving service on NEM-V-ST for a period of 20 years from the date of interconnection of their REGF measured from the date of PTO, indicated on the PTO notice issued by SDG&E.

a) Customers served on Schedule NEM-V who elect to make a one-time switch to NEM-V-ST prior to the conclusion of their NEM-V 20-year transition period and prior to April 15,2023, can maintain their original NEM-V transition period under the NEM-V-ST Schedule provisions. On or after April 15,2023, until the NEM-V-ST Sunset Date (February 14,2024), customers served on Schedule NEM-V who elect to make a one-time switch to the NEM-V-ST Schedule prior to the conclusion of their Schedule NEM-V 20-year transition period can continue service under the NEM-V-ST Schedule from the date of their original Schedule NEM-V PTO through the lesser of the conclusion of their 20-year transition period or nine years; these customers may not restart their 20-year transition period by electing to move to Schedule NEM-V-ST. T

Customers electing to switch to the NEM-V-ST Schedule prior to the conclusion of their Schedule NEM-V-ST 20-year transition period, permanently forfeit any of their Facility's remaining Grandfathering Provisions (transition period) eligibility on Schedule NEM-V and may not later change back to receiving service under Schedule NEM-V. Customers at the end of their 20-year NEM-V enrollment who transitioned to the NEM-V-ST Schedule may not restart a 20-year transition period under NEM-V-ST. These customers should remain on the current NEM-V successor tariff (currently NEM-V-ST) and will be transitioned to the applicable tariff required for customers installing eligible technologies or as otherwise directed by the CPUC. L

SCHEDULE NEM-V-ST

VIRTUAL NET ENERGY METERING FOR MULTI-TENANT AND MULTI-METER PROPERTIES
SUCCESSOR TARIFF

15. NEM-V-ST Legacy Period (continued)

b) Pursuant to D.22-12-056, Customers applying to take service under Schedule NEM-V-ST on or after April 15,2023 through the NEM-V-ST Sunset Date (February 14,2024) per D.23-11-068, may continue to take service on NEM-V-ST for nine years from the date of the interconnection of their REGF measured from the date of PTO, indicated on the PTO notice issued by SDG&E. Customers who submit applications to take service under Schedule NEM-V-ST before April 15, 2023 including customers who have pending applications, are subject to the nine-year provisions in this Special Condition 15.b if the application has major deficiencies that are not corrected before April 15, 2023. T D

c) System Modifications - Generating Facilities eligible for the 20-year transition period outlined above that are modified and/or repaired shall remain eligible for the remainder of their 20-year transition period as long as the modifications and/or repairs do not increase the Generating Facility by more than the greater of (1) 10 percent of the Generating Facility's nameplate rating capacity, as established when the Generating Facility was originally interconnected, or (2) 1 kW; and provided the modifications and/or repairs do not result in the Generating Facility exceeding the Customer's annual onsite load. Qualified Customers making modifications and/or additions to their Generating Facilities that exceed the 10 percent or 1 kW limit referenced above have the option of either metering the additions and/or modifications separately under another eligible tariff, or having the entire Generating Facility served under another eligible tariff, subject to the terms and conditions contained therein.

   If a current NBT-V REGF owner adds a storage device without any other modifications to its generating unit, there is no impact to the Generating Facility's current tariff status, including the legacy period.

d) Ownership Transferability - Generating Facilities eligible for the 20-year transition period shall not lose their eligibility if transferred to a new owner, operator, or SDG&E account, provided the Generating Facility remains at its original location. The transfer of an existing Generating Facility to a new location is considered a new installation requiring a new Interconnection Agreement that is subject to the applicable tariffs in place at the time the new Interconnection Request is completed.

e) Paired Energy Storage Systems - To the extent that eligible energy storage systems are considered an addition or enhancement to the Generating Facility served under this Schedule, the energy storage systems shall be treated in the same way, and subject to the same transition period, as the Generating Facilities to which they are connected.

SPECIAL CONDITIONS (Continued)

16. NEM-V-ST Paired Storage is defined as an energy storage device paired with a renewable electrical generating facility that meets the Renewables Portfolio Standard Guidebook[1] (RPS Guidebook) requirements to be classified as an "addition or enhancement", as described below, that is equipped with a physical, non-import relay or a functionally equivalent non-import configuration, as described in SDG&E's Electric Distribution System Interconnection Handbook.

    a) Types of NEM-V-ST Paired Storage

    The RPS Guidebook establishes two categories of energy storage that may be considered an addition or enhancement to a renewable electrical generation facility: "integrated" and "directly connected" storage.

    (i) Integrated Storage: Integrated Energy Storage is defined as a method of storing energy from a renewable energy resource that is integrated into the renewable electrical generating facility as part of the generation process. For example, in order to be defined as integrated, a battery based storage device must be capable of storing energy from only the renewable electrical generating facility.

    (ii) Directly Connected: Directly Connected Storage is defined as being both: (i) directly connected to the renewable electrical generating facility via an internal power line (i.e., power may not be transmitted from the renewable facility to the energy storage via an external distribution line) and (ii) the storage device must be operated as part of the renewable electrical generating facility

    b) NEM-V-ST Paired Storage Interconnection Cost Responsibility

    NEM-V-ST Paired Storage will be subject to the same interconnection cost responsibility as the renewable electrical generating facility that it is paired with, except those with Eligible Generators sized larger than 1 MW seeking interconnection with SDG&E's Transmission System. In the event the storage device is added at a date later than the date permission to operate the renewable electrical generating facility was issued, the customer will be required to pay the same interconnection fees and costs that the renewable electrical generation facility would be required to pay, as provided for in Electric Rule 21.

    Customers with Generating Facilities sized larger than 1 MW with paired storage seeking interconnection with SDG&E's Transmission System shall be subject to applicable interconnection cost responsibility provisions set forth in the CAISO Tariff.

SPECIAL CONDITIONS (Continued)

17. Prevailing Wage

California Public Utilities (PU) Code 769.2 requires a contractor that installs a Renewable Electrical Generation Facility (REGF) or associated battery storage to comply with prevailing wage requirements in order for the facility to participate in a tariff developed pursuant to PU Code Section 2827 or 2827.1. These requirements are stated in PU Code 769.2 and in case of any discrepancy between tariff language and the PU Code, the language in the PU Code prevails.

The requirements are:

1) The contractor shall pay each construction worker employed, at minimum, the general prevailing rate of per diem wages, except that an apprentice registered in a program approved by the Chief of the Division of Apprenticeship Standards shall be paid, at minimum, the applicable apprentice prevailing rate.

2) The contractor shall maintain and verify payroll records pursuant to Section 1776 of the Labor Code and make those records available for inspection and copying as provided in that Section. The contractor shall not be required to provide copies of certified payroll records to any entity other than the Department of Industrial Relations or the California Public Utilities Commission (Commission). Pursuant to Decision 23-11-068 the contractor may also be required to provide these records to any entity that the Commission designates to act on its behalf to implement this requirement.

3) The contractor shall biannually, on July 1 and December 31 of each year, submit to the Commission digital copies of its certified payroll records for projects. Contractors may submit their records on a voluntary basis more often than the biannual requirement stated in PU Code 769.2. The contractor's submission of payroll records is a condition to access tariffs developed pursuant to PU Code Section 2827 or 2827.1 for a customer REGF subject to PU Code Section 769.2. T N N

The requirements of PU Code Section 769.2 do not apply to projects with a complete interconnection application submission date before January 1, 2024. If a customer or contractor provides documentation confirming that the facility that they are applying for was built on or before December 31, 2023, the prevailing wage requirements will not apply to that project. All projects with an interconnection application submission date on or after January 1, 2024, including applications to modify an existing REGF, are subject to the PU Code 769.2 requirements with the following exceptions: T N T

1) A residential REGF that has a maximum generating capacity of 15 kilowatts or less of electricity.
2) A residential REGF that is installed on a single-family home.
3) A project that is a public work, as defined in Section 1720 of the Labor Code, and that is subject to Article 2 (commencing with Section 1770) of Chapter 1 of Part 7 of Division 2 of the Labor Code.
4) A REGF that serves only a modular home, a modular home community, or multiunit housing that has two or fewer stories.
   a. Modular Home: Modular home, although better constructed, is like manufactured home (as defined in the California Health and Safety Code) where both are constructed offsite. Unlike manufactured home, modular home must meet the same local or state building codes as an on-site home. Modular home does not have the requirement to have a wheeled chassis permanently attached. N
   b. Modular Home Community: A community with two or more Modular Homes. N

SCHEDULE NEM-V-ST

VIRTUAL NET ENERGY METERING FOR MULTI-TENANT AND MULTI-METER PROPERTIES
SUCCESSOR TARIFF

SPECIAL CONDITIONS (Continued)

17. Prevailing Wage

If PU Code 769.2 applies, the customer must execute the **Prevailing Wage Disclosure Form (142-02783)** and submit the form with their interconnection application, and customer's contractor shall confirm to SDG&E that it is up to date with their past required submittals of payroll records.

If customer's contractor has been found to have willfully violated PU Code 769.2 in connection with the construction of customer's REGF, *that facility* shall not be eligible to receive service pursuant to a tariff developed based on PU Code Sections 2827 or 2827.1. Only in the case of multi-tariff configuration, where there is more than one generator behind the same utility billing meter (renewable or not), SDG&E will treat all the generators as one system and therefore none of the renewable generators will be served on tariffs developed based on PU Code Section 2827 or 2827.1, and those renewable generators will be compensated based on PURPA compliant tariff, regardless which facility is subject to the violation of PU Code 769.2. T N | N

If a willful wage violation is alleged, the customer's REGF will remain on the tariff until the Department of Industrial Relations (Department) or a court completes their assessment and makes a final determination. At that time, if the contractor is found in willful violation, then SDG&E will be required to remove the customer's REGF implicated by the violation from the applicable NEM/NBT tariffs and transition the Customer to the PURPA compliant tariff on the next billing cycle (after the required 30/60-day notification). Pursuant to Decision 23-11-068, a customer's single generating account with no benefitting/aggregated account will get a 30-day notice. Customers' single generating account with benefitting/aggregated accounts will get a 60-day notice. While on the PURPA compliant tariff, the REGF will be compensated based on that tariff and the REGF may be subject to Departing Load and Standby charges (if applicable), as the REGF is no longer served under the applicable NEM/NBT tariffs. The customer's REGF billing meter will be trued up before transitioning to the PURPA compliant tariff and any credits remaining after true-up will be forfeited. If the customer's REGF is enrolled in a virtual tariff all benefiting/aggregated accounts will also lose their credits.

If the violation occurs on a single generating account and there are no benefitting/aggregated account(s), SDG&E will notify the Customer at least 30 days in advance of automatically transitioning the customer's REGF on their next billing cycle to a PURPA compliant tariff.

If the violation occurs on a single generating account with benefitting/aggregated account(s) SDG&E will notify the Customer(s) at least 60 days in advance of automatically transitioning the customer's REGF on their next billing cycle to a PURPA compliant tariff.

If a willful wage violation is reversed or nullified by the determining body and the generation account holder or Customer/property owner provides documentation to the utility evidencing such reversal/nullification, then the REGF will be able to regain access to the appliable NEM/NBT tariff as of the next billing cycle after the reversal of the willful wage violation.

Beginning January 1, 2025, contractors who have been found in violation of the prevailing wage rule in PU Code Section 769.2 will not be permitted to apply to interconnect facilities utilizing tariffs established pursuant to PU Code sections 2827 or 2827.1.

SCHEDULE NEM-V-ST

VIRTUAL NET ENERGY METERING FOR MULTI-TENANT AND MULTI-METER PROPERTIES
SUCCESSOR TARIFF

19. Virtual Dual-Tariff (VDT) N

The Virtual Dual Tariff (VDT) is applicable to a Benefitting Account that installs an additional generator behind the SDG&E customer meter while still being part of a virtual arrangement. Pursuant to Resolution E-5374, VDT arrangements are intended to primarily provide resiliency. The VDT is not offered for the generating account of the virtual arrangement; it is only available to the benefitting accounts.

There is no limit on the number of such VDT customers per NEM-V-ST arrangement or network. The VDT is not offered for the generating account of the virtual arrangement; it is only available to the benefiting accounts.

Billing Service Charges – An eligible VDT customer shall remit one time service charges of $25.00 per Dual-tariff Account. These set-up fees may not be charged for tenancy changeovers and shall be limited to no more than $500 per Property.

Net Surplus Compensation: Shall follow the procedures outlined in Rates Section 6 of Schedule NBT.

Non-bypassable Charges (NBC): VDT customers will pay for all the applicable NBCs based on all their usage from the grid in accordance with their Otherwise Applicable Schedule (OAS).

a) NBT Renewable Electrical Generating Facilities[1].

A Customer taking service under this Special Condition is a Virtual Dual-Tariff Net Billing Tariff (VDT-NBT) Customer. The Benefitting Customer that installs a behind the meter Net Billing Tariff eligible generator must meet all requirements of Schedule NBT Net Billing Tariff, the provisions of Schedule NBT will apply unless otherwise specified in this Schedule.

The eligible VDT-NBT Customer Renewable Electrical Generating Facilities must meet all applicable safety, and performance standards established by the National Electrical Code, the Institute of Electrical and Electronics Engineers, and accredited testing laboratories such as Underwriters Laboratories and, where applicable, rules of the California Public Utilities Commission regarding safety and reliability.

i) System Sizing: The eligible VDT-NBT Customer must adhere to the sizing requirements of this Schedule. A VDT-NBT customer may not have the capacity of their allocated credits from the Virtual Generating Facility(ies) together with the behind the meter NBT Renewable Electrical Generating Facility generate more than their individual prior annual usage.

ii) Metering: The eligible VDT-NBT Customer must install at their cost or at the cost of the Owner or Operator any necessary metering equipment to accurately bill the Benefitting Customer for the allocated credits from the Virtual Generating Facility(ies) and the behind the meter NBT Renewable Electrical Generating Facility.

SUCCESSOR TARIFF

19. Virtual Dual-Tariff (VDT) (continued)

iii) Legacy Period: the Legacy period may not be altered or combined as a result of participation as a VDT-NBT customer.

iv) Annual True-Up Process: Upon the Customer receiving Permission to Operate (PTO) for the behind the meter NBT Renewable Electrical Generating Facility, the provisions of this Schedule will apply to the Benefitting Customers Relevant Period for the purposes of a one-time adjustment to align the Annual True-Up of both the NEM-V-ST and the behind the meter NBT Renewable Electrical Generating Facility.

b) Billing: N

i) Monthly energy charges will be calculated and applied as described in the customers OAS.

ii) The Benefitting Account Customer's energy export from their NBT facility export channel will be calculated and applied as described in SC 3 of Schedule NBT. Energy Export Credits (EEC), as described and applied in Schedule NBT, will be used prior to any NEM-V-ST generation credits. N

c) Rule 21 Non-Export Generating Facility T

A customer taking service under this Special Condition is considered a Virtual Dual-Tariff Non-Export (VDT-NE) Customer.

The eligible VDT-NE customer Rule 21 non-export system must meet all applicable safety, and performance standards established by the National Electrical Code, the Institute of Electrical and Electronics Engineers, and accredited testing laboratories such as Underwriters Laboratories and, where applicable, rules of the California Public Utilities Commission regarding safety and reliability.

VDT-NE customers must install at their cost, or the property owner's cost, any necessary equipment to prevent the non-export Generating Facility from exporting to the grid in accordance with Rule 21 non-export requirements. A SDG&E approved physical non-export relay or a functionally equivalent non export configuration that meets the requirements of Rule 21 to prevent the system from exporting to the grid is permitted.

Standby (Schedule S) and departing load (Schedule CGDL-CRS): Rule 21 generators are subject to Standby and departing load charges.
