SCHEDULE PURPA

PUBLIC UTILITY REGULATORY POLICIES ACT

APPLICABILITY

Pursuant to California Public Utilities Commission (CPUC) Decision 23-11-068 SDG&E creates this Public Utility Regulatory Policies Act of 1978 (PURPA) Compliant Tariff. This Tariff is only applicable to customers who have applied after December 31,2023 to interconnect a Renewable Electrical Generating Facility (REGF) or any associated battery storage on tariffs adopted pursuant to Public Utilities (PU) Code 2827 or 2827.1 (i.e., Electric Schedule NEM, NEM-ST, NBT, NEM-V, NEM-V-ST, NBT-V, VNM-A, VNM-A-ST, VNEM-SOMAH or any sub-schedules within these tariffs, collectively "NEM/NBT Tariffs"), and whose contractor has been found to have willfully violated the Prevailing Wage requirements set forth in PU Code Section 769.2. Pursuant to PU Code Section 769.2 and CPUC Decision 23-11-068, if the Customer's contractor is found to have willfully violated Section 769.2 of the PU Code by failing to pay its workers a prevailing wage, the Customer's REGF shall be ineligible to participate in NEM/NBT Tariff.

Customers cannot apply for this Tariff. Their REGF must be transitioned to this Tariff by SDG&E when there is a finding that the Customer's contractor willfully violated PU Code Section 769.2 in connection with construction of Customer's REGF or any associated battery storage.

In the event of finding a willful violation of the prevailing wage requirements set forth in PU Code Section 769.2, the customer will receive a 30- or 60-day notification, as applicable[1], before being transferred to this PURPA Compliant Tariff, and will be transferred following conclusion of the notice period on their next billing cycle.

Customers transitioned to this tariff by SDG&E will not need to sign a new interconnection agreement; all terms and conditions of the signed interconnection agreement and the applicable NEM/NBT Tariff agreement will remain in effect except that the Customer will not receive billing under the NEM/NBT Tariff. The Customer will be compensated for their exports to the grid based on this tariff. Customers served under this tariff may be subject to Departing Load and Standby charges (if applicable). This schedule, similar to the standard PURPA contract, will only compensate qualifying generators up to and including 20 MW. T T

Customers on this tariff are eligible to apply for an applicable alternate tariff, otherwise they will remain on this tariff unless the willful wage violation is reversed or nullified by the determining body. In that event, the Customer's billing will be settled, and the Customer will transition to their previously approved NEM/NBT tariff.

1. Pursuant to Decision 23-11-068, Customers with single generating account with no benefitting/aggregated account will get a 30-day notice. Customers with single generating account with benefitting/aggregated accounts will get a 60-day notice.

PUBLIC UTILITY REGULATORY POLICIES ACT

TERRITORY N

Within the entire territory served by the Utility.

RATES

Customers taking service under this schedule will be billed for all their applicable charges based on their Otherwise Applicable Schedule (OAS).

SPECIAL CONDITIONS

1. Metering: Customers transitioning to this tariff need to have a metering capable of measuring imports and exports separately on different channels with 15-minute intervals. The Customer's generating account must have interval metering capable of registering the flow of electricity in two directions (imports and exports measured with different channels). The meter should be TOU capable if the customer's OAS requires SDG&E to bill the customer for the usage based on TOU rate schedule. If the eligible Generating Account's existing electrical meter does not meet the requirements described herein the eligible Customer shall be responsible for all expenses involved in purchasing and installing an acceptable meter with data communication capabilities required to enable accurate billing under this PURPA Compliant Tariff.

2. Billing: Customers served on this Tariff are not considered NEM/NBT and do not have a Relevant Period. For each Generating and Benefitting Account, consumption and Exports to the Grid shall be valued as follows:

   a. Consumption (all metered usage): Customers will be billed for all metered usage on their applicable charges within their Otherwise Applicable Schedule (OAS).

   b. Export to the Grid: For bundled Customers only exports that are eligible for applicable NEM/NBT Tariffs will be compensated based on this tariff.

      Community Choice Aggregation customers (CCA) or Direct Access (DA) customers should refer to their respective energy providers for the rules governing any compensation for their exports to the grid. N

SPECIAL CONDITIONS (continued) N

2. Billing (continued)

If a customer has multiple tariffs with Net Generation Output Meter (NGOM) on the REGF then the customer's compensation will be limited to the NGOM reading, to ensure only the renewable portion of the generation is compensated. The customer REGF transition to this Tariff will not be eligible for any of the compensation under the NEM/NBT Tariffs and will only be eligible for compensation established by this Tariff. Customers on this schedule will only be compensated based on exports to the grid and there will be no netting of imports and exports at the revenue meter level.

Once customers are transitioned to this tariff, the compensation will be calculated as follows:

Energy Compensation Price: Energy Compensation Prices are the prices published in SDG&E's monthly advice letter submitted to comply with D.20-05-006 using the "As-Executed" pricing option for a PURPA standard offer contract, calculated using the three-year average locational marginal prices for the applicable CAISO Energy Trading Hub. The monthly energy compensation will be the average price established for the Energy Hub in which the customer's REGF is located, based on the Time of Delivery (TOD) period as published in SDG&E's most recent advice letter, multiplied by the hourly kWh exported to the grid. Credits will be based on exports from the previous bill period.

If the customer was on aggregation tariff the generator account will be given the monthly compensation and the benefitting accounts will not receive the compensation (since it is a single customer of record). The benefitting accounts of the former load aggregation arrangement will not be allocated any of the compensation and will be billed for their consumption in accordance with their OAS. N

SPECIAL CONDITIONS (continued) N

3. Modifications: Customers who are being served under this tariff are allowed to modify their system according to their original NEM/NBT Tariff provisions. If modifications increase the REGF system above the applicable NEM/NBT Tariff threshold, the customer's REGF will still be served under this PURPA Compliant Tariff unless the willful prevailing wage violation is reversed. If the willful wage violation is reversed and customer is transitioned to their original tariff, the customer will be transitioned to the most current applicable tariff if modifications increased the REGF system above the NEM/NBT Tariff threshold. If modifications to the REGF were within the tariff threshold, then the customer will be transitioned to their applicable NEM/NBT Tariff.

   Any modifications to the REGF (including whether adding storage or another generator under the multiple tariff provisions of a NEM/NBT Tariff) must meet the applicable NEM/NBT Tariff requirements, otherwise the customer will not be eligible to stay on this PURPA Compliant Tariff and the whole system will be transitioned to Rule 21 Uncompensated Export.

   A customer REGF on the PURPA Compliant Tariff will be compensated for exports to the grid from their REGF as described in Special Condition 2, including any modifications or additions to the REGF. If the willful wage violation is reversed and the customer is returned to the applicable NEM/NBT Tariff, as described above, then the customer will be compensated according to that tariff for the REGF as modified.

4. Change of Party: If the ownership of the REGF transfers to another customer while the REGF is served under this PURPA Tariff, the new customer will maintain service under this Tariff. If the contractor's willful wage violation is reversed after the change of party, the new customer can return to service under the original NEM/NBT Tariff but must meet the applicable Tariff requirements.

5. Compensation Term: If the contractor's willful violation is reversed, when the customer is transitioned back to the applicable NEM/NBT Tariff, the customer's original legacy period on the applicable Tariff will continue and will not restart. The applicable NEM/NBT Tariff legacy period is established in the applicable Tariff and Sub-Tariff and runs from the REGF's original PTO date. N
