SCHEDULE ReMAT

Renewable Market Adjusting Tariff

A. APPLICABILITY

The Renewable Market Adjusting Tariff schedule (ReMAT or this Schedule) implements the renewable resource Feed-In Tariff Program pursuant to California Public Utilities Code (PUC) Section 399.20 and California Public Utilities Commission (CPUC) Decision (D.) 12-05-035, D.13-01-041, D.13-05-034, D.20-10-005 (modifications for compliance with the Public Utility Regulatory Policies Act of 1978 (PURPA) and PUC Section 399.20), D.21-10-005 and D.21-12-032. This Schedule replaces the former schedule Re-MAT that was closed by the CPUC on December 15, 2016, and ordered re-opened in D.21-12-032. The Schedule is available, on a first-come, first-served basis, until the Program Cap (discussed below) is met, to Applicants that own or control a Facility (or Project), meet the eligibility criteria below, and submit a complete Program Participation Request (PPR).

The maximum combined contract capacities of participating Facilities under SDG&E's ReMAT, Schedule is 20.9 megawatts (MW) (Program Cap), which represents SDG&E's unsubscribed, allocated share of the total statewide program cap of 750 MW, as provided for in PUC Section 399.20 and CPUC D.12-05-035 and D.21-12-032.

B. EFFECTIVE DATE

The Effective Date of this re-opened ReMAT is September 1, 2022, as determined in the CPUC's disposition of SDG&E's Advice Letters 3968-E and 3968-E-A. T T

C. TERRITORY

SDG&E's electric service territory.

D. ELIGIBILITY

An applicant for ReMAT (Applicant) must own or control the Project, and the Applicant's proposed Project must meet each of the following eligibility criteria for ReMAT (Eligibility Criteria):

1. Territory: The Project must be physically located within SDG&E's electric service territory and must be interconnected to SDG&E's electric system.

2. Eligible Renewable Energy Resource: The Project must be an Eligible Renewable Energy Resource (ERER) as defined in PUC Section 399.12.

3. Qualifying Facility: The Project must be a Qualifying Facility, as defined by the Federal Energy Regulatory Commission (FERC). See 16 U.S.C. § 824a-3(b); 18 C.F.R. § 292.304(a)(2). "The description of the Project in the PPR must be materially the same as the description of the Qualifying Facility, as certified by the FERC."

4. Contract Capacity: The Contract Capacity for the Project cannot exceed 3.0 MW.

(Continued)

SCHEDULE ReMAT

Renewable Market Adjusting Tariff

D. ELIGIBILITY (continued)

5. Nameplate Capacity: All Projects must have a nameplate capacity that is less than or equal to three (3.0) MW; except that, for conduit hydroelectric facilities operational on or before January 1, 1990, subject to Assembly Bill (AB) 1979 (AB 1979 Facilities), the Applicant's Nameplate Capacity may be less than or equal to four (4.0) MW. For Projects that consist of an ERER paired with Energy Storage, the nameplate capacity of the ERER must be less than or equal to 3 MW and additionally, the nameplate capacity of the Energy Storage device must also be less than or equal to 3 MW.

6. Interconnection Study/Strategically Located: An Applicant must have passed the Fast Track screens, passed Supplemental Review, completed an SDG&E System Impact Study in the Independent Study Process, or completed an SDG&E Phase 1 Study in the Cluster Study Process for its Project (Interconnection Study).

   a. The Project must be interconnected to SDG&E's system except as described in section 6.c below, and the Project's most recent Interconnection Study or Interconnection Agreement must affirmatively support the Project's ability to interconnect (a) within twenty- four (24) months of the execution of the ReMAT power purchase agreement (PPA) Form #142-0610, and (b) without requiring transmission system Network Upgrades in excess of $300,000. If the Project consists of an ERER paired with Energy Storage, the Interconnection Agreement must clearly demonstrate that the Project's Energy Storage device stores energy generated by the ERER exclusively, and it is not capable of receiving for storage any energy from any other source.

   b. If both SDG&E's Rule 21 and SDG&E's Wholesale Distribution Access Tariff ("WDAT") are applicable and available to a Project in a given situation, the Project can choose to pursue interconnection under either SDG&E's Rule 21, or SDG&E's WDAT, unless and until the CPUC makes a determination otherwise. After such a CPUC decision, Projects must interconnect as stipulated in that CPUC determination, except that those Projects that request interconnection pursuant to SDG&E's Rule 21 or SDG&E's WDAT and have submitted a completed PPR under this Schedule prior to any final CPUC determination will not be required to switch interconnection tariffs and will continue to be eligible to receive service under this Schedule, provided the Project is otherwise eligible.

   c. Existing Projects that are already interconnected to an existing SDG&E Transmission Line may participate in ReMAT, provided the Project continues to meet all other ReMAT eligibility requirements. T T

   d. A Project using shared interconnection facilities is eligible to participate in ReMAT if (1) it has a currently effective Interconnection Agreement for that arrangement that was executed on or before December 17, 2021, (2) the Project's net interconnection capacity, as set forth in the Project's Interconnection Agreement does not exceed three (3) MW, and (3) the Project meets all other ReMAT eligibility requirements.

   e. The maximum continuous capacity the Project may export to the grid at the Interconnection Point cannot exceed three (3) MW at any time, as demonstrated by Applicant's interconnection agreement.

(Continued)

SCHEDULE ReMAT

Renewable Market Adjusting Tariff

D. ELIGIBILITY (continued) N

7. Site Control: The Applicant must provide to SDG&E an attestation that it has 100% site control for the Project through: (a) direct ownership; (b) lease; or (c) an option to lease or purchase that may be exercised upon execution of the ReMAT PPA. The Applicant is required to submit a map showing the boundary of the Site for which the Applicant has control as part of the PPR. SDG&E reserves the right to request additional information.

8. Developer Experience: The Applicant must provide to SDG&E an attestation that at least one member of its development team has: (a) completed the development of at least one project of similar technology and capacity; or (b) begun construction of at least one other project of similar technology and capacity. A project less than 1 MW will be deemed to be similar capacity to a Project up to 1 MW. A project between 1 MW to 3 MW will be deemed to be a similar capacity to a Project up to 3 MW. For example, for a 3 MW Project, a project of similar capacity cannot be smaller than 1 MW.

9. Daisy-Chaining: The Applicant must provide to SDG&E an attestation clearly specifying whether the Project is the only exporting project being developed or owned or controlled by the Applicant on any single or contiguous pieces of property. SDG&E may . require the Applicant to submit additional information regarding any projects being developed by the Applicant or Applicant's affiliates within a ten (10) mile radius of the Project as measured from the points representing the shortest distance between the electrical facilities of the two projects. Any such other projects that are located less than one (1) mile from the Project and utilize the same energy source will have their nameplate capacity added to the Applicant's capacity to determine eligibility for service under sections D.4 and D.5 of this Schedule. For projects being developed by Applicant or Applicant's affiliates that are located within a radius of 1 to 10 miles of Applicant's project, as measured from the points representing the shortest distance between the electrical facilities of the two projects, SDG&E will apply the criteria set forth by the FERC in Paragraph 509 of FERC Order 872 (172 FERC ¶ 61,041, issued July 16, 2020) to determine eligibility for this Schedule.

10. Other Incentives: A Project that previously received incentives under the California Solar Initiative (CSI) or the Small Generator Incentive Program (SGIP) is ineligible for ReMAT if the incentives were received within ten (10) years or less of the date that the Applicant submits a PPR for ReMAT for such Project. An Applicant for a Project that previously received incentive payments under CSI or SGIP must provide an attestation to SDG&E stating that, as of the date the Applicant submits the PPR: (a) the Project has been operating for at least ten (10) years from the date the Applicant first received ratepayer-funded incentive payments under CSI or SGIP, for the Project; and (b) to the extent the CPUC requires reimbursement of any ratepayer-funded incentive, the Applicant can demonstrate that the Project's owner has provided the applicable administrator with any required refunds of incentives. N

(Continued)

SCHEDULE ReMAT

Renewable Market Adjusting Tariff

D. ELIGIBILITY (continued) N

11. Net Energy Metering: An Applicant that is a net energy metering (NEM) customer can only participate in ReMAT if the Applicant terminates its participation in the NEM program for the Project prior to the ReMAT PPA's Execution Date.

12. Energy Storage: To qualify as Energy Storage paired with an ERER under this Schedule, both of the following must be met: (1) the Energy Storage must be integral to the Project and entirely within the boundary of the Site; and (2) the sole source of electric energy exchanged with the Energy Storage portion of the Project must be the ERER.

    In addition, the Applicant must clearly describe in the PPR: (1) the method of energy exchange between the Project's Energy Storage equipment and the ERER; and (2) any physical constraints, hardware or software controls designed to ensure the Energy Storage portion of the Project is unable to receive energy for storage from SDG&E's electric system and that the Project can only receive energy for storage that has been generated by the Project's ERER.

13. Eligibility Criteria Non-Compliance: An Applicant may not submit a PPR if, within the previous six (6) months, the Applicant, the Project, or an Affiliated Company has had: (i) a ReMAT PPR rejected pursuant to Section E.1.h of this Schedule; or (ii) a Bioenergy Market Adjusting Tariff (BioMAT) program participation request rejected pursuant to section E.2.i of the schedule BioMAT.

E. PROGRAM PARTICIPATION REQUEST (PPR)

The PPR requirements and review process are described below.

1. An Applicant must submit a complete PPR to be eligible for ReMAT and must submit the following PPR items. Information on how to submit the PPR will be available on SDG&E's website. A PPR must include:

    a. PPR Fee: Applicant must pay a two per kilowatt (kW) ($2/kW) non-refundable application fee as part of each PPR submission. The PPR fee will not be applicable towards the Collateral Requirement under a ReMAT PPA. The manner and form of payment will be specified by SDG&E on its website and/or information technology system.

    b. PPR Form: Applicant must submit the PPR form in a manner and form specified by SDG&E. N

(Continued)

SCHEDULE ReMAT

Renewable Market Adjusting Tariff

E. PROGRAM PARTICIPATION REQUEST (PPR) (continued) N

c. Supporting Documentation: Supporting documentation, including but not limited to, the items below, must be submitted.

(1) Copy of the most recent Interconnection Study for the Project. Any new or amended Interconnection Study or Interconnection Agreement must be submitted to SDG&E within five (5) business days of receipt of the study or agreement.

(2) A completed copy of Appendix E of the ReMAT PPA, including (but not limited to) a single line diagram and a site map clearly outlining the border of the Project site for which site control exists.

(3) An attestation that includes the percentage ownership that the Applicant and Applicant's Affiliates have in each Project for which a ReMAT PPR has been submitted. The determination of the percentage of ownership that an Applicant holds in a Project will be made by the Applicant, based on accounting standards and/or project financing conventions. SDG&E will not have an obligation to review materials or documents related to an Applicant's ownership or financing of a Project and will not have an obligation to advise an Applicant on the percentage ownership that an Applicant has in a Project. SDG&E shall have the right to request and review the Applicant's ownership calculations and supporting documentation. The Applicant must submit an updated attestation within five (5) business days if changes occur.

(4) The attestations required in this Schedule

(5) Such other information and documentation that SDG&E may request to verify compliance with the Eligibility Criteria

d. Review Period and ReMAT Queue Number Assignment: Within twenty (20) business days of receiving a PPR, SDG&E, in its sole discretion, will confirm whether the Applicant's PPR is deemed complete and satisfies the Eligibility Criteria. Applicants will be assigned a program position (ReMAT Queue Number) once the PPR is deemed complete. If the PPR is deemed complete, the ReMAT Queue Number assignment will be based on the date and time that the PPR was received by SDG&E.

e. PPR Rejection: If an Applicant's PPR is deemed incomplete, or the Applicant is otherwise ineligible for a ReMAT PPA, SDG&E will notify the Applicant that the PPR has been rejected (i.e., the PPR is null and void). If rejected, the Applicant will be required to submit a new, correct and complete PPR demonstrating the Applicant's eligibility. The Applicant's ReMAT Queue Number will be based on the date and time of the re-submitted, correct and complete PPR. N

(Continued)

SCHEDULE ReMAT

Renewable Market Adjusting Tariff

E. PROGRAM PARTICIPATION REQUEST (PPR) (continued) N

f. Cure Period: SDG&E, in its sole discretion, may permit the Applicant to cure minor deficiencies, as determined by SDG&E, by re-submitting the PPR (or a subset thereof) within ten (10) business days of notice from SDG&E of the deficiency. To be permitted to cure the deficiencies identified by SDG&E, the Applicant's original PPR must demonstrate that the Applicant's project was eligible at the time of submittal. Applicants whose PPRs contain material substantive issues with program eligibility will be deemed incomplete and rejected. SDG&E will review a re-submitted PPR within twenty (20) business days of receipt of the re-submitted PPR. If the re-submitted PPR is deemed complete after the second review, the ReMAT Queue Number assignment will be based on the date that the PPR was initially received by SDG&E.

g. Change in Eligibility: If an Applicant and/or Project previously deemed eligible to participate in ReMAT no longer meets the Eligibility Criteria, the Applicant must immediately so notify SDG&E in writing and shall relinquish its ReMAT Queue Number for the applicable PPR. The PPR will be deemed to be rejected, as described in Program Participation Request Section E.1.e above.

2. Once an Applicant has a ReMAT Queue Number for its proposed Project, the information provided in the PPR regarding the Project may not be modified, unless permitted or approved by SDG&E, and shall be used for the completion of the ReMAT PPA. SDG&E will indicate what information, if any, in the PPR can be modified in its PPR materials and/or information technology system.

3. An Applicant may contest a determination of ineligibility through the CPUC's standard complaint procedure set forth in Article 4, Complaints, of the CPUC's Rules of Practice and Procedure. Applicants are strongly encouraged to first work cooperatively with SDG&E to resolve any disputes about program eligibility before submitting a complaint.

F. DATES AND PROGRAM PERIODS

1. Initial PPR Submission Date: Applicants will be able to submit a PPR for a Project beginning at 9:00 a.m. Pacific Prevailing Time on [TBD] the Effective Date.

2. Program End: On or after December 17, 2022 SDG&E may submit a request to the CPUC to close this Schedule once the total quantity of remaining available capacity falls to 0.99 MW or less. Upon approval of such request by the CPUC this Schedule will close for all new applicants and no new ReMAT PPAs will be offered or executed by SDG&E. N

(Continued)

SCHEDULE ReMAT

Renewable Market Adjusting Tariff

G. CAPACITY ALLOCATION

ReMAT capacity shall be allocated as follows:

1. On the Effective Date of ReMAT, the initial program capacity (Initial Program Capacity) will be published on SDG&E's website.

2. On the Effective Date of ReMAT, SDG&E will assign an equal portion of the Initial Program Capacity (Initial Allocation) to the three Product Types: 1) Baseload, 2) As-Available Peaking, and 3) As-Available Non-Peaking.

3. On the Effective Date of ReMAT, and on the first business day of each calendar quarter, SDG&E shall publish the total capacity in the queue for each Product Type, the total remaining program capacity and the remaining program capacity for each Product Type on SDG&E's website.

4. Any capacity associated with ReMAT PPAs that are terminated prior to the delivery of any electricity to SDG&E will be allocated by SDG&E to the Product Types applicable to the terminated Projects. Any capacity associated with ReMAT PPAs that are terminated after the delivery of any electricity to SDG&E will not be re-allocated.

5. On or after December 17, 2022, when the remaining available capacity in any of the Product Types reaches 0.99 MW or less, then SDG&E may submit a request to the CPUC via an advice letter to combine the remaining available capacity of that Product type with any remaining available capacity of the other Product Types. Upon CPUC approval of the advice letter, the remaining available capacity from the Product Type with the largest amount of remaining available capacity shall be added to the remaining capacity of the Product Type that has 0.99 MW or less available. T

   Once the remaining available capacity in two (2) or more Product Types reaches 0.99 MW or less, then the remaining available capacity in all 3 Product Types will be combined, and the newly combined remaining available capacity shall be eligible for subscription by any of the 3 Product Types until the capacity is exhausted or the Schedule is closed by the CPUC pursuant to section F.2 of this Schedule.

(Continued)

SCHEDULE ReMAT

Renewable Market Adjusting Tariff

H. PRICE

The prices for ReMAT PPAs will be determined as follows:

1. The ReMAT Contract Price offered for each Product Type, prior to any adjustments through Payment Allocation Factors in accordance with the ReMAT PPA, will be as follows:

Product Type	Contract Price	
As-Available Non-Peaking	$58.38/MWh	I
As-Available Peaking	$67.40/MWh	R
Baseload	$92.33/MWh	I

2. The preceding Contract Prices will be updated annually pursuant to a Resolution issued by the CPUC. SDG&E will publish the current applicable Contract Price for each Product Type on SDG&E's website.

3. Payment Allocation Factors: Contract Prices will be adjusted by the Payment Allocation Factors included in the ReMAT PPA in accordance with the terms in the ReMAT PPA. The Payment Allocation Factors are based on time-of-delivery periods and whether the Project is an energy-only facility or has full capacity deliverability. The ReMAT PPA provides further detail regarding monthly payment calculations and the Payment Allocation Factors. The Payment Allocation Factors will be updated periodically to reflect the most recent CPUC approved Payment Allocation Factors.

I. PPA AWARD

Subscription shall occur as follows:

1. SDG&E will award PPAs to Applicants that meet the Eligibility Criteria in ReMAT Queue Number order until the Program Cap is met. SDG&E will input information from the PPR into the ReMAT PPA for execution. The Contract Price for Applicant's PPA will be the applicable price that was available for the Product Type on the day Applicant's PPR submission was deemed complete. SDG&E will provide written notice to Applicants that are awarded a ReMAT PPA directing the Applicant to provide to SDG&E an executed ReMAT PPA within ten (10) business days.

(Continued)

SCHEDULE ReMAT

Renewable Market Adjusting Tariff

I. PPA AWARD (continued) N

2. Applicants that are awarded a ReMAT PPA must submit an executed ReMAT PPA to SDG&E within ten (10) business days of receiving written notice of the ReMAT PPA award from SDG&E. If the Applicant fails to return an executed ReMAT PPA to SDG&E within ten (10) business days of SDG&E's written notice, the Applicant will be deemed to have rejected the ReMAT PPA and the Applicant's ReMAT Queue Number will be revoked. The capacity associated with the Applicant's Project will be allocated per the Capacity Allocation Section G.4 of this Schedule.

3. The Project may not have an existing PPA or other contract for energy and/or capacity deliveries to SDG&E, or any other counterparty, from the same Project at the time of execution of the ReMAT PPA or, if allowed per the terms of the existing contract, the Seller must provide documentation demonstrating that the existing contract will be terminated on a date certain that is within the Commercial Operation Date (COD) timing allowed in the ReMAT PPA prior to the execution of the ReMAT PPA. Notwithstanding the foregoing, to the extent Seller is seeking an excess sales ReMAT PPA for the Project, Seller is not required to terminate or demonstrate future termination of any applicable contractual arrangements with respect to serving any Site Host Load.

4. Within ten (10) business days of the execution of the ReMAT PPA by both the Applicant and SDG&E, SDG&E shall provide on its website information regarding the executed ReMAT PPA as required by the CPUC in D.12-05-035.

5. If the Project consists of an ERER paired with Energy Storage, SDG&E will submit the executed PPA to the CPUC for review and approval in a Tier 2 advice letter. Any PPA that is submitted to the CPUC for such review and approval will not become effective until CPUC approval is final and non-appealable.

J. ReMAT PPA

The ReMAT PPA will be completed by SDG&E for execution by the Applicant and shall include the information submitted in the PPR, which includes, but is not limited to, the information listed below.

1. Seller Name: Must be a legal entity

2. Project Name

3. Facility Street Address (or nearest intersection) (or coordinates if no intersection or street address)

4. Type of Facility: Baseload or As-Available

5. Renewable Resource Type: Solar PV, Biogas, etc.

6. Interconnection Queue Position N

(Continued)

SCHEDULE ReMAT

Renewable Market Adjusting Tariff

J. ReMAT PPA (continued) N

7. Interconnection Point
8. Service Voltage
9. Delivery Point
10. Expected Commercial Operation Date: No later than twenty-four (24) months from execution date of the ReMAT PPA
11. Contract Capacity
12. Nameplate Capacity
13. Delivery Term: 10, 15, or 20 years
14. Transaction: Full Buy/Sell or Excess Sale
15. Contract Quantity: Provide estimates in kWh/year, net of Station Use and Site Host Load for each year of the Delivery Term.
16. If the Project consists of an ERER paired with Energy Storage, a detailed description of any software, hardware, operating procedures and other information to clearly demonstrate that the Energy Storage cannot receive any energy for storage other than energy generated by the ERER.

K. METERING

Each Project must be electrically independent and separately metered. Metering requirements are described in the ReMAT PPA.

L. SPECIAL CONDITIONS

The following special conditions apply to ReMAT and the ReMAT program:

1. COD Extension Policy: The COD for the ReMAT PPA may only be extended pursuant to the terms in the ReMAT PPA. The ReMAT PPA requires that the Project achieve its COD within twenty-four (24) months after the Execution Date of the ReMAT PPA, with the possibility of one six (6) month extension for Permitted Extensions as set forth in the ReMAT PPA.
2. Termination of Service: Unless terminated earlier pursuant to the ReMAT PPA, the ReMAT PPA automatically terminates immediately following the last day of the Delivery Term. N

(Continued)

SCHEDULE ReMAT

Renewable Market Adjusting Tariff

L. SPECIAL CONDITIONS

1. ReMAT Suspension: SDG&E may file a motion with the CPUC to suspend ReMAT when evidence of market manipulation or malfunction exists. The motion must be filed on the applicable CPUC service list. The motion shall identify the portion of the program suspended, the specific behavior and reasons for the suspension, and SDG&E's proposal for resolving the problem. Any requested suspension will be implemented by SDG&E immediately upon filing and shall not be modified or changed unless directed by the CPUC.

2. Modifications to the ReMAT Program: Notifications regarding modifications to Schedule ReMAT and/or the ReMAT PPA will be published on SDG&E's website and sent directly to Projects in the ReMAT queue when such modifications are submitted to the CPUC for approval.

M. DENIAL OF ReMAT SERVICE

SDG&E may deny a request for service, upon written notice, under this Schedule if it makes any of the following findings:

1. The Project does not meet the requirements of PUC Section 399.20 or any applicable CPUC decision.

2. The transmission or distribution grid that would serve as the point of interconnection is inadequate.

3. The Project does not meet all applicable state and local laws and building standards, and utility interconnection requirements.

4. The aggregate of all electric generation facilities on a distribution circuit would adversely impact utility operation and load restoration efforts of the distribution system.

5. The Project does not meet the eligibility requirements in sections D.4 and D.5 of this Schedule.

6. There exist any outstanding obligations owed to SDG&E by the Applicant under a previously executed ReMAT PPA or other agreement related to the sale of energy, capacity, green attributes, or other related products, in each case, that relates to either any portion of the site or the interconnection queue position to be utilized by the Project seeking service.

7. The Applicant does not otherwise meet the requirements of this Schedule.

Upon receipt of notice of denial from SDG&E, the Applicant may appeal the decision to the CPUC.

(Continued)

SCHEDULE ReMAT

 N

Renewable Market Adjusting Tariff N

N. DEFINITIONS N

Capitalized terms in this Schedule shall have the same meaning as the defined term in the ReMAT PPA (Form #142-0610), unless the term is otherwise defined in this Schedule.

1. Assembly Bill (AB) 1979 Facility: For the purposes of this Schedule, an AB 1979 Facility is a conduit hydroelectric facility that was operational on or before January 1, 1990, and on or before January 1, 1990, the facility had a nameplate capacity equal to the Applicant's Nameplate Capacity.

2. Affiliated Company(ies): For the purpose of this Schedule, Affiliated Company(ies) shall mean: (i) any entity with a direct or indirect equity interest in the Applicant or the Project; (ii) any subsidiary of the Applicant; or (iii) any affiliate of the Applicant.

3. As-Available Peaking: For the purposes of this Schedule, As-Available Peaking shall have the same meaning as the defined term "As-Available Facility" in Appendix A of the ReMAT PPA and have a generation profile demonstrating intermittent energy delivery with 95% or more of the expected output generated in the super-peak and shoulder-peak periods. SDG&E reserves the right to request a generation profile and supporting information for the Project to confirm the generation profile.
4. As-Available Non-Peaking: For the purposes of this Schedule, As-Available Non-Peaking shall have the same meaning as the defined term "As-Available Facility" in Appendix A of the ReMAT PPA and have a generation profile demonstrating intermittent energy delivery with less than 95% of the expected output in the super-peak and shoulder-peak periods. SDG&E reserves the right to request a generation profile and any supporting information for the Project to confirm the generation profile.

5. Baseload: For the purposes of this Schedule, Baseload shall have the same meaning as the defined term "Baseload Facility" in Appendix A of the ReMAT PPA.

6. Energy Storage or Energy Storage System: Project enhancement(s) that render a Project capable of storing electric energy and delivering the stored electric energy to the grid at a time other than when the electricity is generated. For Schedule ReMAT, an Energy Storage Project may include hybrid or co-located storage enhancements so long as such storage enhancements cannot be charged with energy from the electric grid. Stand-alone Energy Storage is ineligible to participate in this Schedule.

7. Product Type: The Product Types offered for service under this Schedule consist of As Available Non-Peaking, As-Available Peaking and Baseload. For Projects consisting of an ERER paired with Energy Storage, the Project's capacity will be allocated to the Product Type that most closely matches the expected generation profile of the Project.

8. SDG&E Transmission Line: A For the purposes of this Schedule and the ReMAT PPA, an SDG&E Transmission Line must be an SDG&E-owned network line under the operational control of the California Independent System Operator, and must have been operational as of December 17, 2021. N
