SCHEDULE MPL

MANDATORY PAY-FOR-LOAD DEMAND RESPONSIVENESS PROGRAM

SPECIAL CONDITIONS (Continued)

15. Contract Requirement for Service. As a condition precedent to commencing service on Schedule MPL the customer shall submit to the utility a completed form contract for service on Schedule MPL and, if acceptable to the utility and at the utility's sole discretion, the utility shall sign and return the form contract to the customer. A customer may not commence service on Schedule MPL until the utility has signed and returned the contract for service on Schedule MPL to the customer.

16. Utility Combining of Customer Loads. The utility may combine the loads of the customers taking service on Schedule MPL to comport with the requirements of the California Independent System Operator's Demand Relief Agreement. The customer shall specify a master account for billing purposes.

17. Utility Reporting. The utility will provide the Commission with an annual report on the economics of this Schedule MPL. The annual report will contain information on individual customer performance. Information provided to the Commission for customers will be provided under Commission confidentiality rules and will not be available for public review.

18. Term of Service. The customer shall remain on Schedule MPL once signing the contract for service on Mandatory Pay-For-Load Demand Responsiveness Program, commencing no earlier than May 15, 2001, continuing through December 31, 2001, following completion of the contract.

19. Form of Curtailment Communications. The utility will issue a Curtailment Notice in a manner chosen by the utility, which may include Internet, pager, telephone or e-mail. If the utility selects Internet, telephone, or e-mail, the customer shall be responsible for the cost to receive the communications. In the event the utility chooses to use a pager or wireless provider, the utility will assume the responsibility for arranging and paying for the services of the wireless provider. Once a Curtailment Notice is issued, the customer will comply with the notice by providing Reserve Demand in the amount designated in the contract for service on Schedule MPL within the Response Time and continuing for the duration of the curtailment.

20. Limitation on Availability of Service. A customer currently taking service on Schedules AL-TOU-CP, VDRP, BIP, OBMC, or SLRP may not participate in this tariff. A customer taking service on any other Demand Relief Program rate schedule may be denied service on Schedule MPL if the possibility exists for the customer to receive more than one incentive payment for the same demand reduction. Under no circumstances shall a customer receive more than one incentive payment for the same demand reduction. The utility will not permit any customer on Schedule MPL unless the customer can, at the utility's sole discretion, meet all of the requirements of the California Independent System Operator's Demand Relief Agreement. Schedule MPL is further limited to a total of 2.9 MW of Reserve Demand from all customers. T

21. Termination and Amendment. SDG&E may terminate or amend the contract for service on Schedule MPL in the event that the California Independent System Operator terminates or amends its Demand Relief Agreement with the utility.
