# SCHEDULE PTR

PEAK TIME REBATE

## APPLICABILITY

This schedule will be eliminated on January 1, 2019 and is applicable, in combination with the customer's otherwise applicable rate schedule, to customers receiving electric bundled residential service through a residential rate schedule that requires separate metering. In order for this schedule to take effect, the customer must have a smart meter installed, tested, and verified according to Utility procedures. The customer must also opt in to this Schedule by electing to receive day-ahead alerts. The required meter data management and billing system infrastructure at the Utility must be in place. California Alternate Rates for Energy (CARE) customers, customers participating in a demand response program and Net Energy Metering customers are eligible for the service under this schedule. Direct Access (DA) and Community Choice Aggregation (CCA) customers are not eligible for service under this Schedule. N

## TERRITORY

Within the entire territory served by the Utility.

## RATES

A bill credit of $0.75/kWh will be paid for each kWh of actual reduction in consumption during each Peak Time Rebate (PTR) event. Customers with enabling technology will receive a higher bill credit of $1.25/kWh. The actual reduction in consumption will be measured using a customer-specific reference level. The bill credit will be paid out for any PTR event in which the actual reduction in consumption is greater than zero. If no PTR events are called or the actual reduction in consumption is less than or equal to zero, then no bill credit will be given.

## SPECIAL CONDITIONS

1. Definitions: The Definitions of terms used in this schedule are found either herein or in Rule 1, Definitions.

2. Program Operation:

   a. Multiple/Summary Accounts: For customers with multiple accounts, summary billings, or multiple meters at a premise, the bill credit is calculated for each individual qualifying meter and applied, if applicable, to the corresponding service account.

3. Peak Time Rebate Event period: PTR events will take place between the hours of 2 p.m. and 6 p.m. on the days when PTR events are initiated by the Utility. T

4. Customer-Specific Reference Level (CRL): A CRL is a customer specific calculation that will be calculated for each event.

# SCHEDULE PTR

PEAK TIME REBATE

SPECIAL CONDITIONS (Continued)

4. Customer-Specific Reference Level (CRL): (Continued)

   a. CRL for Weekday events:
   The CRL for a weekday event is defined as the total consumption for the PTR event period averaged over the three (3) highest days from within the immediately preceding five (5) similar non-holiday week days prior to the event. The highest days are defined to be the days with the highest total consumption between 2 p.m. and 6 p.m. The similar days will exclude weekends, holidays, other PTR event days, and will exclude other demand response program event days for customers participating in multiple demand response programs. T

   b. CRL for Weekend and Holiday events:
   The CRL for a weekend or holiday event is defined as the total consumption during the PTR event period for the highest day from within the immediately preceding three 3 weekend days.

   c. CRL for Net Energy Metering Customers:
   The calculation of the CRL for customer with net energy metering will be the same as in section 4 parts a and b above. The CRL calculation will be based on the net energy during the event period.

5. Actual Reduction in Consumption: The actual reduction in consumption will be calculated as the difference between the customer's total usage during each PTR event and the CRL calculated for each event. The actual reduction in consumption will be rounded to the nearest whole kWh.

6. Event Triggers:

   a. Every time a CPP event is triggered a PTR event may also be triggered.

   b. A PTR event may also be triggered the day of an event if warranted by temperature and system load conditions.

   c. A PTR event may also be triggered as warranted by extreme system conditions such as special alerts issued by the California Independent System Operator, Utility system emergencies related to grid operations, or under conditions of high forecasted California spot market prices or for testing/evaluation purposes.

   d. Whenever the California Independent System Operator has issued an alert or warning notice, the California Independent System Operator shall be entitled to request that the utility, at its discretion, call a program event pursuant to this Schedule.

   The Utility will evaluate and consider all relevant including temperature and system load conditions, as well as other system operating conditions, energy market conditions and other emergency conditions in determining whether to trigger a PTR event.

7. Program Availability: A PTR event may be called on any day of the year. There is no limit to the number of PTR events that may be called.
